Foresight In Action Developing Policyoriented Scenarios:

Foresight in Action M. B. A. van Asselt, 2010 Of findings P 137 **Foresight in Action** Marjolein Van Asselt, Susan Van 't Klooster, 2015-06-01 Assessing the future is vital in informing public policy decisions One of the most widespread approaches is the development of scenarios which are alternative hypothetical futures Research has indicated however that the reality of how professionals go about employing scenarios is often starkly at odds with the theory a finding that has important ramifications for how the resulting images of the future should be interpreted It also shows the need for rewriting and updating theory This book based on an intensive five year study of how experts actually go about assessing the future provides a groundbreaking examination of foresighting in action Obtained via ethnographic techniques the results lay bare for the first time the real processes by which scenarios are made It is also the first book to examine foresighting for public policy which is so often overlooked in favour of business practice From handling of discontinuity to historical determinism the analysis reveals and explains why foresight is difficult and what the major pitfalls are Each chapter ends with a toolkit of recommendations for practice The book aims to help readers to reflect on their own practices of public oriented foresight and thus to foster a deeper understanding of the key principles and challenges Ultimately this will lead to better informed decision making

The Foreseeable Future for Water Planning Andrew James Segrave, 2014-09-14 People and societies conceptualise and experience time in fundamentally different ways This basic aspect of perception significantly influences the way we frame problems and conceive solutions This book shows how time perspectives differ across national cultures and across professional roles It shows how these differences generate ambiguity when it comes to defining problems and devising solutions in the water sector This is especially important when dealing with problems such as Sustainable Water Resources Management and Climate Change that involve culturally and professionally diverse stakeholders Response strategies to such problems inherently require concerted action because of the large spatial and temporal scale on which they take place and to minimise the occurrence of conflicting interventions This disparity between diverse problem perceptions and the need for collective understanding and united action is increasingly recognised as an important concern in the field of water resource management The conclusions are important because the time horizons considered in planning and setting research agendas influence what problems are perceived what questions are asked and what solutions are sought In general more time needs to be invested in framing problems This is particularly important for participatory planning and transdisciplinary research where the diversity in Motivational Space is greatest It is recommended that Motivational Space be collectively and explicitly framed from the outset of all planning projects especially in terms of Temporal Extent When it comes to setting research agendas it is important to match the Motivational Space of those who prioritize the questions with the goal of the research programme Author Andrew James Segrave KWR Watercycle Research Institute Utrecht The Netherlands
