*Fundamentals of Hydrology* Tim Davie, 2019-04-23 The third edition of *Fundamentals of Hydrology* provides an absorbing and comprehensive introduction to the understanding of how fresh water moves on and around the planet and how humans affect and manage the freshwater resources available to them The book consists of three parts each of fundamental importance in the understanding of hydrology The first section deals with processes within the hydrological cycle our understanding of them and how to measure and estimate the amount of water within each process This also includes an analysis of how each process impacts upon water quality issues The second section is concerned with the measurement and analytical assessment of important hydrological parameters such as streamflow and water quality It describes analytical and modelling techniques used by practising hydrologists in the assessment of water resources The final section of the book draws together the first two parts to discuss the management of freshwater with respect to both water quality and quantity in a changing world *Fundamentals of Hydrology* is a lively and accessible introduction to the study of hydrology at university level It gives undergraduates a thorough understanding of hydrological processes knowledge of the techniques used to assess water resources and an up to date overview of water resource management Throughout the text examples and case studies from all around the world are used to clearly explain ideas and techniques Essay questions guides to further reading and website links are also included

**Hydrology** M. Robinson, R. C. Ward, 2017-02-15 The book comprises nine chapters with seven core chapters dealing in detail with the basic principles and processes of the main hydrological components of the water cycle precipitation interception evaporation soil water groundwater streamflow and water quality It takes a broadly non mathematical approach although some numeracy is assumed particularly in the treatment of evaporation and soil water The introductory and concluding chapters show the relations and interactions between these components and also put the importance of water into a wider human context its significant role in human history its key role today and potential role in future in the light of climate change and increasing global population pressures The book is thoroughly up to date contains over 100 diagrams and photographs to explain and amplify the concepts described and contains over 750 references for further study

*Forest Hydrology and Biogeochemistry* Delphis F. Levia, Darryl Carlyle-Moses, Tadashi Tanaka, 2011-06-15 This international rigorously peer reviewed volume critically synthesizes current knowledge in forest hydrology and biogeochemistry It is a one stop comprehensive reference tool for researchers and practitioners in the fields of hydrology biogeoscience ecology forestry boundary layer meteorology and geography Following an introductory chapter tracing the historical roots of the subject the book is divided into the following main sections Sampling and Novel Approaches Forest Hydrology and Biogeochemistry by Ecoregion and Forest Type Hydrologic and Biogeochemical Fluxes from the Canopy to the Phreatic Surface Hydrologic and Biogeochemical Fluxes in Forest Ecosystems Effects of Time Stressors and Humans The volume concludes with a final chapter that reflects on the current state of knowledge and identifies some areas in need of

Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series *The History of the Study of Landforms or the Development of Geomorphology* Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology      **Rainfall-Runoff Modelling** Keith J. Beven, 2012-01-30 *Rainfall Runoff Modelling The Primer* Second

Edition is the follow up of this popular and authoritative text first published in 2001 The book provides both a primer for the novice and detailed descriptions of techniques for more advanced practitioners covering rainfall runoff models and their practical applications This new edition extends these aims to include additional chapters dealing with prediction in ungauged basins predicting residence time distributions predicting the impacts of change and the next generation of hydrological models Giving a comprehensive summary of available techniques based on established practices and recent research the book offers a thorough and accessible overview of the area Rainfall Runoff Modelling The Primer Second Edition focuses on predicting hydrographs using models based on data and on representations of hydrological process Dealing with the history of the development of rainfall runoff models uncertainty in model predictions good and bad practice and ending with a look at how to predict future catchment hydrological responses this book provides an essential underpinning of rainfall runoff modelling topics Fully revised and updated version of this highly popular text Suitable for both novices in the area and for more advanced users and developers Written by a leading expert in the field Guide to internet sources for rainfall runoff modelling software     Streamflow Generation Processes K. J. Beven, 2006 The book is the first in the Benchmark Papers in Hydrology series Each volume tackles a specific topic and is edited by a recognised scientific authority The volume editor selects and provides an introduction to and a commentary on the papers that are reproduced in that volume Thirty one papers spanning the period 1933 1984 commencing with Horton's earliest on infiltration in the hydrological cycle are reproduced in this book     Progress in Modern Hydrology John C. Rodda, Mark Robinson, 2015-08-26 Hydrology is vital to human civilisations as well as to natural ecosystems yet it has only emerged as a distinct scientific discipline during the last 50 years or so This book reviews the development of modern hydrology primarily through the experiences of the multidisciplinary team of scientists and engineers at Wallingford near Oxford who have been at the forefront of many of the developments in UK hydrological research These topics include The development of basic understanding through the collection of data with specialised instrumentation in experimental basins The study of extreme flows both floods and droughts The role moisture in the soil Studies of the processes controlling evaporation Water resource studies Modelling and prediction of the extremes of flow improved Understanding of water quality issues A widening recognition of the importance of an ecosystem approach Meeting the challenges of climate change Data handling Future developments in hydrology and the pressures which generate them Readership hydrologists in both academia and a wide range of applied fields such as civil engineering meteorology geography and physics as well as advanced students in earth science environmental science and physical geography programmes worldwide     Status and Perspectives of Hydrology in Small Basins Andreas Herrmann, Sybille A.
