Landscape Ecology: A Widening Foundation Vittorio Ingegnoli, 2013-04-17 Exactly 25 years ago on a warm autumn afternoon a young ecologist walked slowly through a tiny oak wood and perched on a log to reflect He had measured and seemingly knew all the species present trees mosses mushrooms birds and more The research based on this and other woods in the landscape was the first rigorous test to see if island biogeographic theory was of use in heterogeneous land Unexpectedly an interior to edge model was found to be more useful But on this beautiful sunny day he gazed out through the trees at the surrounding bean and maize fields Suddenly a terrible thought hit him The land surrounding the other woods differed slightly from this scene Here there were two bean fields plus a maize field meadow hedgerow and farm road but the other comparably sized woods studied had different mixes of these land uses Wouldn't the surroundings seriously affect the species in the woods Had he done bad science an awful feeling for a scientist Immediately he went to all his ecology books searching for discussions of patchiness mosaic pattern interactions between ecosystems and the like Nothing Surprise was a new ingredient to ponder Then for 3 months every spare moment found him in the university library digging deeper collecting tidbits and clues A new feeling took over challenge and excitement The spatial arrangement of ecosystems and land uses is important ecologically A giant but approachable scholarly frontier

Landscape Perspectives Marc Antrop, Veerle Van Eetvelde, 2017-12-19 Climb a mountain and experience the landscape Try to grasp its holistic nature Do not climb alone but with others and share your experience Be sure the ways of seeing the landscape will be very different We experience the landscape with all senses as a complex dynamic and hierarchically structured whole The landscape is tangible out there and simultaneously a mental reality Several perspectives are obvious because of language culture and background Many disciplines developed to study the landscape focussing on specific interest groups and applications Gradually the holistic way of seeing became lost This book explores the different perspectives on the landscape in relation to its holistic nature We start from its multiple linguistic meanings and a comprehensive overview of the development of landscape research from its geographical origins to the wide variety of today's specialised disciplines and interest groups Understanding the different perspectives on the landscapes and bringing them together is essential in transdisciplinary approaches where the landscape is the integrating concept
