**The Censor's Hand** Carl E. Schneider, 2015-04-10 An argument that the system of boards that license human subject research is so fundamentally misconceived that it inevitably does more harm than good Medical and social progress depend on research with human subjects When that research is done in institutions getting federal money it is regulated often minutely by federally required and supervised bureaucracies called institutional review boards IRBs Do can these IRBs do more harm than good In *The Censor's Hand* Schneider addresses this crucial but long unasked question Schneider answers the question by consulting a critical but ignored experience the law's learning about regulation and by amassing empirical evidence that is scattered around many literatures He concludes that IRBs were fundamentally misconceived Their usefulness to human subjects is doubtful but they clearly delay distort and deter research that can save people's lives soothe their suffering and enhance their welfare IRBs demonstrably make decisions poorly They cannot be expected to make decisions well for they lack the expertise ethical principles legal rules effective procedures and accountability essential to good regulation And IRBs are censors in the place censorship is most damaging universities In sum Schneider argues that IRBs are bad regulation that inescapably do more harm than good They were an irreparable mistake that should be abandoned so that research can be conducted properly and regulated sensibly

Lawrence, 2016-05-11 When the new HIPAA privacy rules regarding the release of health information took effect medical historians suddenly faced a raft of new ethical and legal challenges even in cases where their subjects had died years or even a century earlier In Privacy and the Past medical historian Susan C Lawrence explores the impact of these new privacy rules offering insight into what historians should do when they research write about and name real people in their work Lawrence offers a wide ranging and informative discussion of the many issues involved She highlights the key points in research ethics that can affect historians including their ethical obligations to their research subjects both living and dead and she reviews the range of federal laws that protect various kinds of information The book discusses how the courts have dealt with privacy in contexts relevant to historians including a case in which a historian was actually sued for a

privacy violation Lawrence also questions who gets to decide what is revealed and what is kept hidden in decades old records and she examines the privacy issues that archivists consider when acquiring records and allowing researchers to use them She looks at how demands to maintain individual privacy both protect and erase the identities of people whose stories make up the historical record discussing decisions that historians have made to conceal identities that they believed needed to be protected Finally she encourages historians to vigorously resist any expansion of regulatory language that extends privacy protections to the dead Engagingly written and powerfully argued *Privacy and the Past* is an important first step in preventing privacy regulations from affecting the historical record and the ways that historians write history *American Book Publishing Record*, 2003

**Bioethics In Singapore: The Ethical Microcosm** John Michael Elliott, Sylvia S N Lim, Calvin Wai-loon Ho, 2010-07-19 This book provides an analysis of the ways in which the BAC has established an ethical framework for biomedical research in Singapore following the launch of the Biomedical Sciences Initiative by the Singapore Government The editors and authors have an intimate knowledge of the working of the BAC and the focus of the book includes the ways in which international forces have influenced the form and substance of bioethics in Singapore Together the authors offer a comparative account of the institutionalisation of biomedical research ethics in Singapore considered in the wider context of international regulatory efforts The book reviews the work of the BAC by placing it within the broader cultural social and political discourses that have emerged in relation to the life sciences since the turn of the 21st century This book is not primarily intended to be a retrospect or an appraisal of the contribution of the BAC though this is one aspect of it Rather the main intention is to make a

substantive contribution to the rapidly emerging field of bioethics Ethical discussions in the book include consideration of stem cell research and cloning genetics and research with human participants and focus on likely future developments as well as the past Many of the contributors of the book have been personally involved in this work and hence they write with an authoritative first hand knowledge that scholars in bioethics and public policy may appreciate As indicated above the book also explains the way in which ethics and science international and local have interacted in a policy setting Scholars and policy makers may find the Singaporean experience to be a valuable resource as the approach has been to make the ethical governance of research in Singapore consistent with international best practice while observing the requirements of a properly localised application of universally accepted principles In addition at least three chapters the first three chapters in particular are accessible to the lay reader interested in the development of bioethics and biomedical sciences both inside and outside Singapore from 2000 the year in which the BAC was established Both scholars and interested lay readers are therefore likely to find this publication a valuable reference a
