Fascinated with Science Yufeng Zhao,2025-04-28 Aesthetic criticism of science is a historically established practice to advance fundamental research particularly in physics and mathematics However it was criticized that many terms currently used for aesthetic criteria are bounty words that promise some benefit that cannot be controlled or measured In this book a theory of aesthetics is formulated based on Genesis 1 and the Book of Changes and applied to analyze classical mechanics thermodynamics and electrodynamics The aesthetic criticism casts new light on the foundation of physics and the internal tension that appeals for their transition to modern physics Unambiguous rationale for fundamental laws of physics is revealed and rich aesthetic facets are exposed in the structure of theories For example each of the three branches of classical physics has four fundamental laws which are found to be structurally related to each other in the same pattern required by aesthetic principles The informing power of these aesthetic principles for modern science lies in that they are deeply tethered to the origin of beauty and the way beauty is expressed Physics Douglas C. Rowan Salisbury *Rethinking History, Science, and Religion* Bernard Lightman, 2019-10-03 The historical interface between science and religion was depicted as an unbridgeable conflict in the last quarter of the nineteenth century Starting in the 1970s such a conception was too simplistic and not at all accurate when considering the totality of that relationship This volume evaluates the utility of the complexity principle in past present and future scholarship First put forward by historian John Brooke over twenty five years ago the complexity principle rejects the idea of a single thesis of conflict or harmony or integration or separation between science and religion *Rethinking History Science and Religion* brings together an interdisciplinary group of scholars at the forefront of their fields to consider whether new approaches to the study of science and culture such as recent developments in research on science and the history of publishing the global history of science the geographical examination of space and place and science and media have cast doubt on the complexity thesis or if it remains a serviceable historiographical model **Student Lecture Notebook** Douglas C.
