Spoken Language Corpus and Linguistic Informatics Yuji Kawaguchi,Susumu Zaima,Toshihiro Takagaki,2006-01-01

Printbegr nsninger Der kan printes 10 sider ad gangen og max 40 sider pr session **Exploring the Lexis Grammar Interface** Ute Römer,Rainer Schulze,2009-03-11 This volume showcases studies that recognize and provide evidence for the inseparability of lexis and grammar The contributors explore in what ways these two areas often treated separately in linguistic theory and description form an organic whole The papers in Section I Setting the Scene introduce some of the key methodological approaches and theoretical positions at the lexis grammar interface while Section II Considering the Particulars contains papers that report on case studies and show concrete applications of the central methods and theories Exploring the Lexis Grammar Interface is a stimulating collection of papers for anyone who wishes to learn more about and get fresh state of the art perspectives on language patterning **Corpus-based Analyses of the Problem Solution**

Pattern Lynne Flowerdew,2008-02-06 This book reports research on the Problem Solution rhetorical pattern which has to date received very little attention in corpus based studies Insights from genre analysis and systemic functional grammar are also applied to the analysis of the Problem Solution pattern thus moving towards a more multi faceted analysis of corpus data The pattern is investigated in two specialized corpora of technically oriented report writing a professional corpus and a student corpus using a key word and key key word analysis Phraseological analyses of key words in both corpora are presented Data show that students writing lacks a range of lexico grammatical patternings for expressing the Problem and Solution elements of the pattern The book concludes with some pedagogic implications and applications of the findings Suggested concordancing activities are discussed within the context of key issues in the field of data driven learning *The Structure of Spoken Language* Philippe Martin,2015-11-26 Using an innovative approach this book focuses on a widely debated area of phonetics and phonology intonation and specifically its relation to metrics its interface with syntax and whether it can be attributed more to phonetics or phonology or equally to both Drawing on data from six Romance languages

French Italian Spanish Portuguese Catalan and Romanian whose rich intonation patterns have long been of interest to linguists Philippe Martin challenges the assumptions of traditional phonological approaches and re evaluates the data in favour of a new usage based model of intonation He proposes a unified description of the sentence prosodic structure focusing on the dynamic and cognitive aspects of both production and perception of intonation in speech leading to a unified grammar of Romance languages sentence intonation This book will be welcomed by researchers and advanced students in phonetics and phonology

Dependency Linguistics Kim Gerdes, Eva Hajičová, Leo Wanner, 2014-09-15 This volume offers the reader a unique possibility to obtain a concise introduction to dependency linguistics and to learn about the current state of the art in the field It unites the revised and extended versions of the linguistically oriented papers to the First International Conference on Dependency Linguistics held in Barcelona The contributions range from the discussion of definitional challenges of dependency at different levels of the linguistic model its role beyond the classical grammatical description and its annotation in dependency treebanks to concrete analyses of various cross linguistic phenomena of syntax in its interplay with phonetics morphology and semantics including phenomena for which classical simple phrase structure based models have proven to be unsatisfactory The volume will be thus of interest to both experts and newcomers to the field of dependency linguistics and its computational applications

English General Nouns Michaela Mahlberg, 2005-12-14 This book proposes an innovative approach to general nouns General nouns are defined as high frequency nouns that are characterised by their textual functions Although the concept is motivated by Halliday Hasan 1976 the corpus theoretical approach adopted in the present study is fundamentally different and set in a linguistic framework that prioritises lexis The study investigates 20 nouns that are very frequent in mainstream English as represented by the Bank of English Corpus The corpus driven approach to the data involves a critical discussion of descriptive tools such as patterns semantic prosodies and primings of lexical items and the concept of local textual functions is put forward to characterise the functions of the nouns in texts The study not only suggests a characterisation of general nouns but also stresses that functions of lexical items and properties of texts are closely linked This link requires new ways of describing language

Terms in Context Jennifer Pearson, 1998-05-15 Terms in Context applies the methodology that has been developed over the last two decades in corpus linguistics to the relatively new and still little developed field of corpus based terminography While corpora are already being used by some terminologists for the identification of terms and retrieval of contextual fragments this book describes the first attempt to use corpora for terminography in much the same way as large general reference corpora are already being used for general language lexicography The author goes beyond the standard problem of identifying terms as opposed to non terminological lexical items in text and focuses on identifying metalanguage patterns which point to the presence in text of parts of reusable definitions of terms The author examines these patterns and shows how the information which they contain can be retrieved and used as input for terminological entries Terms in Context should be of interest to traditional

terminologists who have not previously considered adopting a corpus based approach to their work or at least not on the scale proposed here to modern terminologists who use text primarily for the identification of terms and the retrieval of contextual examples to those in the corpus linguistic community who have hitherto used general language corpora for the purposes of lexicography and have not previously considered using special purpose corpora for more specific lexicography studies and to academics in the ESP LSP community who are interested in showing students how to use text as a means of ascertaining the meaning of terms

Strategies in Academic Discourse Elena Tognini-Bonelli, Gabriella Del Lungo Camiciotti, 2005-12-21 This book focuses on theoretical and descriptive issues and techniques in the study of text and discourse Drawing on a large number of corpora containing academic language from spoken language to published research papers the authors approach their subject from multiple angles The academic language of biology literature philosophy economics agriculture linguistics and applied linguistics The analysis of intertextual features these papers show leads to penetrating results

Collocations in a Learner Corpus Nadja Nesselhauf, 2005-01-27 Collocations are both pervasive in language and difficult for language learners even at an advanced level In this book these difficulties are for the first time comprehensively investigated On the basis of a learner corpus idiosyncratic collocation use by learners is uncovered the building material of learner collocations examined and the factors that contribute to the difficulty of certain groups of collocations identified An extensive discussion of the implications of the results for the foreign language classroom is also presented and the contentious issue of the relation of corpus linguistic research and language teaching is thus extended to learner corpus analysis

Corpus and Sociolinguistics Bróna Murphy, 2010 Age is by far the most underdeveloped of the sociolinguistic variables in terms of research literature To date research on age has been patchy and has generally focused on the early life stages such as childhood and adolescence ignoring for the most part healthy adulthood as a stage worthy of scrutiny This book examines the discourse of adulthood and accounts for sociolinguistic variation with regards to age and gender through the exploration of a 90 000 word age and gender differentiated spoken corpus of Irish English The book explores both the distribution and use of a number of high frequency pragmatic features of spoken discourse that appear as key items in the corpus Part 1 of the book provides an introduction a theoretical overview of age as a sociolinguistic variable and a description on how to compile a small spoken corpus for sociolinguistic research Part 2 consists of five chapters which investigate and explore key features such as hedges vague category markers intensifiers boosters and high frequent items of taboo language in relation to the variables age and gender The book is of interest to undergraduates or postgraduates taking formal courses in sociolinguistics applied linguistics pragmatics or discourse analysis It is also of interest to students and researchers interested in using corpus linguistics in sociolinguistic research

Insubordination Nicholas Evans, Honoré Watanabe, 2016-11-18 The phenomenon of insubordination can be defined diachronically as the recruitment of main clause structures from subordinate structures or synchronically as the independent use of constructions exhibiting characteristics of

subordinate clauses Long marginalised as uncomfortable exceptions insubordinated clause phenomena turn out to be surprisingly widespread and provide a vital empirical testing ground for various central theoretical issues in current linguistics the interplay of langue and parole the emergence of structure the question of where productive syntactic rules give way to constructions the role of prosody in language change and the question of how far grammars are produced by isolated speakers as opposed to being collaboratively constructed in dialogue This volume the first book length treatment on the topic assembles studies of languages on all continents by scholars who bring a range of approaches to bear on the topic from historical linguistics to corpus studies to typology to conversational analysis

Proceedings of the VIIth GSCP International Conference. Speech and Corpora Massimo Pettorino, Heliana Mello, Tommaso Raso, 2012 The 7th International Conference of the Gruppo di Studi sulla Comunicazione Parlata dedicated to the memory of Claire Blanche Benveniste chose as its main theme Speech and Corpora The wide international origin of the 235 authors from 21 countries and 95 institutions led to papers on many different languages The 89 papers of this volume reflect the themes of the conference spoken corpora compilation and annotation with the technological connected fields the relation between prosody and pragmatics speech pathologies and different papers on phonetics speech and linguistic analysis pragmatics and sociolinguistics Many papers are also dedicated to speech and second language studies The online publication with FUP allows direct access to sound and video linked to papers when downloaded

Prosody and Iconicity Sylvie Hancil, Daniel Hirst, 2013-03-28 The contributions to this volume focus on the interrelation between prosody and iconicity and shed new light on the topic by enlarging the number of parameters traditionally considered and by confronting various theoretical backgrounds The parameters taken into account include socio linguistic criteria age sex socio economic category region different kinds of speech situation affect attitudes and emotions gestures morpho syntactic constraints The analysis is pursued in theoretical frameworks such as Information Structure theory Grice's theory Relevance theory experiential blending Gussenhoven's biological codes prosodic modelling automatic detection The languages covered include English French Italian Swedish Egyptian Arabic and Majorcan Catalan The book will be of great interest to linguists working on prosody

Progressives, Patterns, Pedagogy Ute Römer, 2005-08-18 This book presents a large scale corpus driven study of progressives in real English and school English combining an analysis of general linguistic interest with a pedagogically motivated one A systematic comparative analysis of more than 10 000 progressive forms taken from the largest existing corpora of spoken British English and from a small corpus of EFL textbook texts highlights numerous differences between actual language use and textbook language concerning the distribution of progressives their preferred contexts favoured functions and typical lexical grammatical patterns On the basis of these differences a number of pedagogical implications are derived the integration of which then leads to a first draft of an innovative concept of teaching progressives a concept which responds to three key criteria in pedagogical description typicality authenticity and communicative utility The analysis also

demonstrates that many existing accounts of the progressive are inappropriate in several respects and that not enough attention is being paid to lexical grammatical relations Winner of the Wissenschaftspreis Hannover 2006 for outstanding research monographs *Corpus-based Approaches to Construction Grammar* Jiyoung Yoon, Stefan Th. Gries, 2016-09-08 This volume brings together empirical Construction Grammar studies to i promote cross fertilization between researchers interested in constructional approaches on various languages and ii further the growing trend towards empirically rigorous research that takes seriously a commitment not only to usage based theories but also to usage based methodologies Accordingly the chapters in this volume comprise a range of studies not based on synchronic contemporary English but include Dutch old English Italian and Spanish This volume also features studies from a wider range of statistical sophistication some chapters use more traditional frequency and attestation based approaches some chapters use inferential statistical techniques to explore lexically specific preferences and patterns in constructional slots and some chapters use multifactorial hypothesis testing techniques or multivariate exploratory tools to discover patterns in corpus data that a mere eye balling or simple statistical tools would not uncover **Language Variation □ European perspectives II** Stavroula Tsipakou, Marilena Karyolemou, Pavlos Pavlou, 2009-11-19 This volume contains a selection of papers from the 4th International Conference on Language Variation in Europe ICLaVE 4 which was held at the University of Cyprus from June 17th 19th 2007 The variety of theoretical frameworks and methodological perspectives from Generative Grammar Word Grammar Government Phonology Optimality Theory and Distributed Morphology to quantitative Labovian and ethnographic approaches to variation and change real and apparent time studies phonetic analysis and metatheoretical papers on quantitative analysis as well as the sheer number of linguistic varieties examined attest both to the breadth and scope of the conference and to its status as a meeting place for synchronic and diachronic linguistic description and theoretical exploration One of the major themes running through the volume is the explicit concern with methodological refinement Almost all the contributions address issues of methodology in various aspects of data collection and analysis be they questionnaire surveys and interview data spoken or written corpora real and apparent time studies dialect atlases and maps statistical models or software Alongside methodological issues and especially with regard to the treatment of historical data many of the papers in the volume explicitly address theoretical issues for example the relative weighting of linguistic systemic cognitive and discourse factors in the exploration of language variation and change Corpus-based Studies of Lesser-described Languages Amina Mettouchi, Martine Vanhove, Dominique Caubet, 2015-05-15 This volume presents new findings based on the analysis of spoken corpora in thirteen different Afro Asiatic languages a unique endeavor in the domain of lesser described languages It will be of interest to corpus linguists general linguists typologists and linguists specializing in Afro Asiatic languages In addition to the rarity of corpus studies based on endangered and lesser described languages the volume is remarkable due to its focus on the role of prosody in interaction with several other phenomena including code

switching and borrowing Phonology syntax and information structure are explored and the issue of the elaboration of strategies for the typological comparison of corpora is addressed in several papers The volume also contains a presentation of software development conducted within the scope of the CorpAfroAs project and based upon the widely used ELAN The sound indexed and morphosyntactically annotated corpora with their OLAC metadata and several other deliverables can be accessed and searched at <http://dx.doi.org/10.1075/scl.68.website> **Discourse in the Professions ...**

Connor-Upton, Thomas Albin Upton, 2004-01-01 This book explores the structure and use of academic and professional discourse through the lens of corpus linguistics The goal of this book is to show how insights from corpus linguistic analyses can help us better understand how we use academic and professional language and help us find ways to better train newcomers to the genres used in various professional contexts The contributions to this book show that specialized corpora of specific genres from a variety of fields allow us to make more relevant observations about the function and use of language for particular purposes The specialized corpora examined include written and spoken academic genres written and spoken business and legal genres and written philanthropic genres The book showcases a variety of approaches to analyzing the discourse of specialized corpora and each chapter concludes with a reflection on the practical and pedagogical implications of the analysis
