**The Librarian's Introduction to Programming Languages** Beth Thomsett-Scott, 2016-06-21 The Librarian's Introduction to Programming Languages presents case studies and practical applications for using the top programming languages in library and information settings. While there are books and Web sites devoted to teaching programming, there are few works that address multiple programming languages or address the specific reasons why programming is a critical area of learning for library and information science professionals. There are many books on programming languages, but no recent items directly written for librarians that span a variety of programs. Many practicing librarians see programming as something for IT people or beyond their capabilities. This book will help these librarians to feel comfortable discussing programming with others by providing an understanding of when the language might be useful, what is needed to make it work, and relevant tools to extend its application. Additionally, the inclusion of practical examples lets readers try a small app for the language. This also will assist readers who want to learn a language but are unsure of which language would be the best fit for them in terms of learning curve and application. Languages covered are JavaScript, PERL, PHP, SQL, Python, Ruby, C, C++, Java. This book is designed to provide a basic working knowledge of each language, presented case studies which show the programming language used in real ways, and resources for exploring each language in more detail.

**How Computers Make Books** John Whittington, 2024-03-19 Learn about computer science by exploring the fascinating journey of making this book. How Computers Make Books by author and publishing software developer John Whittington takes readers on a journey through the computer processes needed to create this very book. Each chapter explores the elegance of modern digital printing from how a computer knows where to place ink to reproducing shades of grey and laying out paragraphs on the page. From graphics rendering, search algorithms, and functional programming to indexing and typesetting, you will discover how human descriptions translate into computer programs. How can a computer understand document formatting? How a program decides where to print ink on a page. Why computer science is so interesting to computer scientists and why it might interest you and much more. How Computers Make Books introduces what is wonderful about computer science by telling the story of how computers have transformed the ancient art of publishing books. About the technology. Computers have transformed every industry, even ones as traditional as creating books. If you have ever been mystified about what goes into programming a computer to do practical, familiar tasks, then this book is for you. In it, you will answer interesting questions about human-computer interaction. How do computers represent all the different languages and letters used by humans? How do we compress a book's worth of complex information to be transferred in seconds? And what exactly is a computer program? This book answers all those questions by telling the story of how it was created.
