*Chilton's BSA Motorcycle Repair and Tune-up Guide* O'Ce Ritch, 1968      **Organizational, Direct Support, General Support and Depot Maintenance Manual Including Repair Parts and Special Tools List**, 1969      ASSEMBLED PCB REPAIR & REWORK TECHNIQUES RATAN SENGUPTA, 2023-09-08

Apart from physical damage component failure is the most common reason why PCBs need repair and rework. Component failure may be the result of low quality dislodging or ageing of components. A bad PCB layout however is the most common cause. Power failure overheated parts and burned components may result from a poor design. PCB rework is the process of making changes to or fixing flaws on a printed circuit board after it has already been produced or assembled. This may require anything from changing components to cleaning up excess solder to fixing broken traces or pads. Circuit board rework is a crucial step in electronics production because it allows manufacturers to address any issues with their final products before they reach the end user. In Electronics defects leading to rework may include Poor solder joints because of faulty assembly or thermal cycling. Solder bridges unwanted drops of solder that connect points that should be isolated from each other. Faulty components. Engineering parts changes upgrades etc. Components broken due to natural wear physical stress or excessive current. Components damaged due to liquid ingress leading to corrosion weak solder joints or physical damage. Surface mount technology SMT rework and through hole technology THT rework are the two most common forms of the printed circuit board PCB rework. Surface mount technology or SMT refers to small flat components that are soldered directly onto the surface of a printer.
