**Mathematical Modelling for Next-Generation Cryptography** Tsuyoshi Takagi, Masato Wakayama, Keisuke Tanaka, Noboru Kunihiro, Kazufumi Kimoto, Dung Hoang Duong, 2017-07-25 This book presents the mathematical background underlying security modeling in the context of next generation cryptography By introducing new mathematical results in order to strengthen information security while simultaneously presenting fresh insights and

developing the respective areas of mathematics it is the first ever book to focus on areas that have not yet been fully exploited for cryptographic applications such as representation theory and mathematical physics among others Recent advances in cryptanalysis brought about in particular by quantum computation and physical attacks on cryptographic devices such as side channel analysis or power analysis have revealed the growing security risks for state of the art cryptographic schemes To address these risks high performance next generation cryptosystems must be studied which requires the further development of the mathematical background of modern cryptography More specifically in order to avoid the security risks posed by adversaries with advanced attack capabilities cryptosystems must be upgraded which in turn relies on a wide range of mathematical theories This book is suitable for use in an advanced graduate course in mathematical cryptography while also offering a valuable reference guide for experts
