purposeful learned movement and is one of the most common sequelae of stroke head injury neoplasm and abnormal ageing. Dyspraxics are found not only in specialist neurological units but also in rehabilitation centres general medical and surgical wards geriatric units and in the community. Despite this there was little systematic discussion of dyspraxia in major texts on stroke head injury rehabilitation or movement disorders at the time. Originally published in 1986 one aim of this book was to correct the imbalance in the attention paid to the disorder. The emphasis of the book is practical dealing with the recognition and assessment of dyspraxic dysfunction and guidelines and issues in its remediation. It was the standard textbook on the topic for many years and directly relevant at the time to clinicians in the fields of clinical psychology occupational therapy and physiotherapy speech therapy neurology and geriatrics.
