Digital Technology in Public Health and Rehabilitation Care Raymond K. Y. Tong, Balasankar Ganesan, 2024-09-04. Digital Technology in Public Health and Rehabilitation Care: COVID Era provides an in-depth examination on how digital technology has impacted public health and rehabilitation during the COVID-19 pandemic. The book showcases the range of digital technology applications utilized in healthcare, including the use of mobile phones, computers, wearable and non-wearable technologies, sensors, 3D printers, robotics, Artificial Intelligence (AI), internet technologies, websites, and apps, virtual and augmented realities, and computer games. With a wealth of case studies and insights, this book is an essential resource on the impact of digital technology on public health and rehabilitation services in the COVID-19 era. The COVID-19 pandemic had a major impact on the rehabilitation services available to those in need, particularly for older adults, people with physical and cognitive impairments, children with autism and ADHD, and individuals with physical and mental health disorders. In response to these challenges, the book focuses on the potential for advanced digital technologies to revolutionize public health and rehabilitation services, highlighting the need for researchers and healthcare professionals to work together to promote digital-based interventions. Provides in-depth insights into the various digital technologies that are impacting public health and rehabilitation, including Mobile Smart phone, Computers, wearable and non-wearable technologies, sensors, 3D printers, technologies, robotics, and more. Highlights the impact of the COVID-19 pandemic on public health and rehabilitation services and how digital technology can help provide effective solutions during these challenging times. Brings together the expertise of multidisciplinary professionals, including researchers, doctors, nurses, physical therapists, occupational therapists, speech therapists, psychologists, and more.

m-Health Robert S. H. Istepanian, Bryan Woodward, 2016-11-14. Addresses recent advances from both the clinical and technological perspectives to provide a comprehensive presentation of mHealth. This book introduces the concept of mHealth, first coined by Robert S. H. Istepanian in 2003. The evolution of mHealth since then, how it was transformed from an academic concept to a global healthcare technology phenomenon, is discussed. Afterwards, the authors describe in detail the basics of the three enabling scientific technological elements of mHealth: sensors, computing, and communications, and how each of these key ingredients has evolved and matured over the last decade. The book concludes with a detailed discussion of the future of mHealth and presents future directions to potentially shape and transform healthcare services in the coming decades. In addition, this book discusses the rapid evolution of mHealth in parallel with the maturing process of its enabling technologies, from bio-wearable sensors to the wireless and mobile communication.
