The Early Development of the Aviation Industry Malcolm Abbott, Jill Bamforth, 2019-05-09 The Early Development of the Aviation Industry Entrepreneurs of the Sky provides an introduction to the world of the early aviation industry and the business endeavours of the original aviators Many of the first pioneers who flew heavier than air planes went on to develop considerable industrial concerns In doing so they exhibited a number of entrepreneurial qualities which provide useful case studies for those interested in studying how successful entrepreneurs create or develop opportunities at the inception and emergence of high tech industries This book looks at the careers of pioneer aviators in the United States Britain and France such as A V Roe Thomas Sopwith Glenn Curtiss and William Boeing It examines this group of entrepreneurs during the start up and early development stages of an emerging industry undergoing considerable technological change and relates this experience to contemporary studies and experiences of entrepreneurship The book explores what made these men successful in their entrepreneurial endeavours to help promote a better understanding of what makes an entrepreneur and what business and economic conditions are needed to allow such men to be successful This book makes a major contribution to our knowledge of the development of the twentieth century economy and is essential reading for students and academics who are interested in the development of aviation and the nature of entrepreneurial behaviour *Anti-Aircraft Artillery in Combat, 1950-1972* Mandeep Singh, 2020-04-30 An in depth look at the combat performance of ground based air defenses during the Korean War Vietnam War Middle East conflicts and other campaigns Though anti aircraft artillery was extensively used in combat in the First World War it wasn't until World War II that it came into prominence shooting down more aircraft than any other weapon and seriously degrading the conduct of air operations In the battle between the attackers and anti aircraft artillery the latter had the upper hand when the war ended The post war years saw a decline in anti aircraft artillery as peace prevailed and the advent of the jet aircraft seemed to tilt the balance in favor of the aircraft as they flew faster and higher seemingly beyond the reach of anti aircraft artillery It would take all the hi tech equipment and the guile and cunning that anti aircraft artillery could muster to try and reclaim pole position It is that story of the tug of war between the aircraft and artillery that forms the narrative of this book as it traces the history of combat employment of anti aircraft artillery from the

Korean War in effect the first Jet Age war to the War of Attrition between Arab states and Israel when the missiles came of age sending the aircraft scurrying for cover Mandeep Singh's book is the first attempt to look at the performance of anti-aircraft artillery incorporating the views, analyses and experiences of Soviet, Arab and South Asian Armies through the major wars between 1950 and 1972

America's First Aircraft Carrier David F Winkler, 2024-02-15 America's First Aircraft Carrier tells the remarkable story of the USS Langley. The narrative provides an in-depth discussion of the ship's origins as the collier USS Jupiter which was built with a first of propulsion system that has been adapted for use in present-day Ford-class carriers. Author David F Winkler considers the post-World War I debate for procuring carriers, the decision to convert Jupiter and the identification of constructor Clayton Simmers as the father of the American aircraft carrier. The evolution of the Langley as an experimental ship was tied to the introduction of new doctrine for the United States. Promoting an independent naval air arm against Brig Gen Billy Mitchell's vision of an independent air force, the U.S. Navy saw Langley as an operational aircraft carrier that would change the way the Navy fought wars at sea. While the story of Langley is that of the origins of naval air combat, it is also a record of the vessel's service in World War II until the ship's final posting to the Asiatic Fleet where she met her demise on February 27, 1942 off the southern coast of Java. Many of the U.S. Navy's pioneering naval aviators are closely associated with this ship, including Kenneth Whiting, John H. Towers, Godfrey DeCourcelles, Chevalier Virgil C. Griffith, Mel Pride, Patrick N. L. Bellinger, Joseph M. Reeves, Gerald Bogan, Aubrey Fitch, Felix Stump, Ernest J. King, Warren G. Child, Dan Gallery, and Frank D. Wagner. A number of these individuals would go on to play critical roles during World War II. Langley's story is their story. Aircraft carriers remain the centerpiece of American sea power projection. America's First Aircraft Carrier provides the context on how CV-1, the Covered Wagon, and carrier development and utilization came to be.

The Industrial Revolution Therese Harasymiw, 2021-07-15 When people talk about the Industrial Revolution, they tend to point to the positives: Electric lighting, washing machines, cars, the list of things from this period that have improved people's lives around the world is seemingly endless. However, the negative effects of this historical turning point, such as climate change and oil depletion, are frequently glossed over. Through detailed maps and in-depth sidebars, this volume examines the lasting worldwide impact, both positive and negative, of the Industrial Revolution. This allows readers to think critically about history, which they're challenged to do through chapter questions.

Airplanes, the Environment, and the Human Condition Hans A. Baer, 2019-07-23 The number of airplane flights worldwide continues to grow, and it is one of the many drivers of climate change. This book examines the aviation industry from an anthropological perspective, focusing on the sector's environmental impact and the challenges facing attempts to shift to more sustainable solutions. Hans Baer outlines how airplanes have become a key component of modern cultural and social life and how the world system has become increasingly dependent on them to function. He critically examines current efforts to mitigate the climatic impact of the air

travel and argues for a significant move away from air transport suggesting that such a shift may only be achieved through a more fundamental change in the world system Air Combat Legends: Supermarine Spitfire, Messerschmitt Bf109 ,2004
