decades civil engineering has undergone substantial technological change which has naturally been reflected in the
terminology employed in the industry Efforts are now being made in many countries to bring about a systematization and
unification of technical terminology in general and that of civil engineering in particular The publication of a multilingual
dictionary of civil engineering terms has been necessitated by the expansion of international cooperation and information
exchange in this field as well as by the lack of suitable updated bilingual dictionaries This Dictionary contains some 14 000
English terms together with their German French Dutch and Russian equivalents which are used in the main branches of civil
engineering and relate to the basic principles of structural design and calculations the elasticity theory strength of materials
soil mechanics and other allied technical disciplines to buildings and installations structures and their parts building
materials and prefabrications civil engineering technology and practice building and road construction machines
construction site equipment housing equipment and fittings including modern systems of air conditioning as well as to
hydraulics and irrigation constructions The Dictionary also includes a limited number of basic technical expressions and
terms relating to allied disciplines such as architecture and town planning as well as airfield railway and underground
construction The Dictionary does not list trade names of building materials parts and machines or the names of chemical
compounds Nor does it give adverbial adjective or verbal terms **Bouwkundig weekblad architectura** ,1939
