Tsunami James Goff, Walter Dudley, 2021-03-16 Every year that passes without a tsunami means that we're just that much closer to our next one What can we do to ensure we're prepared when the next catastrophic tsunami strikes The ferocious waves of a tsunami can travel across oceans at the speed of a jet airplane They can kill families destroy entire cultures and even gut nations To understand these beasts in our waters well enough to survive them we must understand how they're created and learn from the past In this book tsunami specialists James Goff and Walter Dudley arm readers with everything they need to survive a tsunami and maybe even avoid the next one The book takes readers on a historical journey through some of the most devastating tsunamis in human history some of the quirky ones and even some that may not even be what most of us think of as tsunamis Diving into personal and scientific stories of disasters Tsunami pulls readers into the

many ways these waves can be generated ranging from earthquakes and volcanic eruptions to explosions landslides and beyond The book provides overviews of some of the great historical events the 1755 Lisbon 1946 Aleutian 1960 Chile and 2004 Indian Ocean tsunamis but also some of the less well known as well such as the 1958 Lituya Bay 563 CE Lake Geneva a 6 000 year old Papua New Guinean mystery and even a 2 5 Million year old asteroid This is not straight science though Each event is brought to life in a variety of ways through stories of survival human folly and echoes of past disasters etched in oral traditions and the environment The book combines research from oceanography biogeography geology history archaeology and more with data collected from over 400 survivor interviews Alongside carefully selected images and the scientific measurements of these tsunamis the book offers tales of survival heroism and tragic loss Through a balanced combination of personal experience the Earth s changing environment tales of tragedy and a recount of oral traditions Tsunami allows readers to engage with a new scientific approach to these overwhelming waves The resulting book unveils the science of disaster like never before

Exploring the Trans-Neptunian Solar System National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Commission on Physical Sciences, Mathematics, and Applications,Committee on Planetary and Lunar Exploration,1998-04-29 In the last decade our knowledge of the outer solar system has been transformed as a result of the Voyager 2 encounter with Neptune and its satellite Triton and from Earth based observations of the Pluto Charon system However the planetary system does not simply end at the distance of Pluto and Neptune In the past few years dozens of bodies have been discovered in near circular low inclination orbits near or beyond the orbit of Neptune These bodies are now believed to be directly related to each other and to Pluto Charon and Triton and as a class they define and occupy the inner boundary of a hitherto unexplored component of the solar system the trans neptunian region Exploring the Trans Neptunian Solar System reviews current understanding of the trans neptunian solar system and makes recommendations for the future exploration of this distant realm
