**Principles of Drug Addiction Treatment: a Research-Based Guide** National Drug Abuse (NIDA), 2018-05-28 Drug addiction is a complex illness It is characterized by intense and at times uncontrollable drug craving along with compulsive drug seeking and use that persist even in the face of devastating consequences This update of the National Institute on Drug Abuse s Principles of Drug Addiction Treatment is intended to address addiction to a wide variety of drugs including nicotine alcohol and illicit and prescription drugs It is designed to serve as a resource for healthcare providers family members and other stakeholders trying to address the myriad problems faced by patients in need of treatment for drug abuse or addiction Addiction affects multiple brain circuits including those involved in reward and motivation learning and memory and inhibitory control over behavior That is why addiction is a brain disease Some individuals are more vulnerable than others to becoming addicted depending on the interplay between genetic makeup age of exposure to drugs and other environmental influences While a person initially chooses to take drugs over time the effects of prolonged exposure on brain functioning compromise that ability to choose and seeking and consuming the drug become compulsive often eluding a person s self

control or willpower But addiction is more than just compulsive drug taking it can also produce far reaching health and social consequences For example drug abuse and addiction increase a person s risk for a variety of other mental and physical illnesses related to a drug abusing lifestyle or the toxic effects of the drugs themselves Additionally the dysfunctional behaviors that result from drug abuse can interfere with a person s normal functioning in the family the workplace and the broader community Because drug abuse and addiction have so many dimensions and disrupt so many aspects of an individual s life treatment is not simple Effective treatment programs typically incorporate many components each directed to a particular aspect of the illness and its consequences Addiction treatment must help the individual stop using drugs maintain a drug free lifestyle and achieve productive functioning in the family at work and in society Because addiction is a disease most people cannot simply stop using drugs for a few days and be cured Patients typically require long term or repeated episodes of care to achieve the ultimate goal of sustained abstinence and recovery of their lives Indeed scientific research and clinical practice demonstrate the value of continuing care in treating addiction with a variety of approaches having been tested and integrated in residential and community settings
