Motorcycle Accident Reconstruction Nathan Rose,2022-01-07 Accident reconstruction utilizes principles of physics
and empirical data to analyze the physical electronic video audio and testimonial evidence from a crash to determine how
and why the crash occurred how the crash could have been avoided or to determine whose description of the crash is most
accurate This process draws together aspects of mathematics physics engineering materials science human factors and
psychology and combines analytical models with empirical test data Different types of crashes produce different types of
evidence and call for different analysis methods Still the basic philosophical approach of the reconstructionist is the same
from crash type to crash type as are the physical principles that are brought to bear on the analysis This book covers a basic
approach to accident reconstruction including the underlying physical principles that are used then details how this approach
and the principles are applied when reconstructing motorcycle crashes This second edition of *Motorcycle Accident
