### **Dynamic Wireless Sensor Networks Focus:**

Dynamic Wireless Sensor Networks Sharief M. A. Oteafy, Hossam S. Hassanein, 2014-08-08 In this title the authors leap into a novel paradigm of scalability and cost effectiveness on the basis of resource reuse In a world with much abundance of wirelessly accessible devices WSN deployments should capitalize on the resources already available in the region of deployment and only augment it with the components required to meet new application requirements However if the required resources already exist in that region WSN deployment converges to an assignment and scheduling scheme to accommodate for the new application given the existing resources Such resources are polled from many fields including multiple WSNs already in the field static networks WiFi WiMAX cellular etc in addition to municipal industrial and mobile resources The architecture framework and pricing policy as well as approaches for backward compatibility with existing deployments are presented in this book We elaborate on the formalization of the problem and contrast with existing work on coverage This paradigm adopts optimal assignments in WSNs and exploits dynamic re programming for boosting post deployment and backward compatible protocols
