**Dynamics of Data Envelopment Analysis** Jati Sengupta, 2013-11-11 Data envelopment analysis develops a set of nonparametric and semiparametric techniques for measuring economic efficiency among firms and nonprofit organizations Over the past decade this technique has found most widespread applications in public sector organizations However these applications have been mostly static This monograph extends this static framework of efficiency analysis in several new directions These include but are not limited to the following 1 a dynamic view of the production and cost frontier where capital inputs are treated differently from the current inputs 2 a direct role of the technological progress and regress which is so often stressed in total factor productivity discussion in modern growth theory in economics 3 stochastic efficiency in a dynamic setting where reliability improvement competes with technical efficiency 4 flexible manufacturing systems where flexibility of the production process and the economies of scope play an important role in efficiency analysis and 5 the role of economic factors such as externalities and input interdependences Efficiency is viewed here in the framework of a general systems theory model Such a view is intended to broaden the scope of applications of this promising new technique of data envelopment analysis The monograph stresses the various applied aspects of the dynamic theory so that it can be empirically implemented in different situations As far as possible abstract mathematical treatments are avoided and emphasis placed on the statistical examples and empirical illustrations Efficiency Models in Data Envelopment Analysis J. K. Sengupta, B. Sahoo, 2006-10-06 This volume discusses the latest techniques and their economic applications for modern industries like computer pharmaceutical banking and other manufacturing Both econometric and mathematical programming techniques

are analyzed so as to develop a synthetic approach

**Dynamics of Industry Growth** Jati Sengupta,2012-05-02 Economic growth of a country depends on its industries The focus of modern growth theory is basically macroeconomics although neoclassical models use competitive markets and the optimization behavior of households and firms in general equilibrium framework The emphasis here is on industry growth where the microfoundations of industry are analyzed in terms of economic efficiency The various linkages which link firm growth with the industry growth are discerned here under various market structures both competitive and monopolistic The role of information in facilitating market signals and allowing the adoption of new

processes has been especially emphasized in this volume. Many issues of market failure and the suboptimality of competitive equilibria are due to incomplete and imperfect information structures and we need a comprehensive theory of information structures underlying the process of industry growth and its dynamics. This book will be of interest to economists studying economic and industry growth and innovation.

#### **Advanced Mathematical Methods for Economic Efficiency Analysis**

Pedro Macedo, Victor Moutinho, Mara Madaleno, 2023-06-21. Economic efficiency analysis has received considerable worldwide attention in the last few decades with Stochastic Frontier Analysis (SFA) and Data Envelopment Analysis (DEA) establishing themselves as the two dominant approaches in the literature. This book, by combining cutting edge theoretical research on DEA and SFA with attractive real world applications, offers a valuable asset for professors, students, researchers and professionals working in all branches of economic efficiency analysis as well as those concerned with the corresponding economic policies. The book is divided into three parts, the first of which is devoted to basic concepts making the content self contained. The second is devoted to DEA and the third to SFA. The topics covered in Part 2 range from stochastic DEA to multidirectional dynamic inefficiency analysis including directional distance functions, the elimination and choice translating algorithm, benefit of the doubt, composite indicators and internal benchmarking for efficiency evaluations. Part 3 also includes exciting and cutting edge theoretical research on e.g. robustness, nonparametric stochastic frontier models, hierarchical panel data models and estimation methods like corrected ordinary least squares and maximum entropy.

#### **Composite Systems**

**Decisions** Mark Sh. Levin, 2007-05-30. Composite decisions consist of subdecisions and correspond to a composite system. This approach extends the traditional paradigm of decision making of Herbert A. Simon, i.e. choice of the best alternative, and realizes a two stage solving scheme: a selection of alternatives as the best subdecisions (local decisions) and b) composition of these local decisions into a composite global decision, accounting for the quality of the local decisions and their compatibility. This book describes an approach based on systems engineering and considered modular design of composite decisions. It describes basic systems approaches and examines basic technological problems for composite systems with applied examples including modular hierarchical design, multistage design and planning, redesign, improvement, adaptation, evaluation and combinatorial evolution development. Applied researchers, students and practitioners will find this book of value. It will also interest mathematicians, computer scientists, economists and social engineers.
