Dynamical Systems In Social Psychology:

Dynamical Systems in Social Psychology Robin R. Vallacher, Andrzej Nowak, 1994-01-11 A dynamical system refers to a set of elements that interact in complex often nonlinear ways to form coherent patterns Because of the complexity of these interactions the system as a whole may evolve over time in seemingly unpredictable ways as new patterns of behavior emerge This metatheory has proven useful in understanding diverse phenomena in meteorology population biology statistical mechanics economics and cosmology The book demonstrates how the dynamical systems perspective can be applied to theory construction and research in social psychology and in doing so provides fresh insight into such complex phenomena as interpersonal behavior social relations attitudes and social cognition

Dynamical Social Psychology Andrzej Nowak, Robin R. Vallacher, 1998-10-09 Traditional approaches to social psychology have proven highly successful in identifying causal mechanisms underlying human thought and behavior With the recent advent of the dynamical approach it is now possible to assemble sets of such mechanisms into coherent systems This book uses innovative concepts and tools to illuminate the processes by which individuals groups and societies evolve and change in a systemic self sustaining manner at times seemingly independent of external influences Readers learn how the dynamical approach facilitates novel predictions and insights into such social psychological phenomena as attitudes social judgment goal directed behavior attraction and relationships Featuring a wealth of charts and figures derived from original research and computer simulations the volume is grounded in classic and contemporary theories of social psychology

Attracted to Conflict: Dynamic Foundations of Destructive Social Relations Robin R. Vallacher, Peter T. Coleman, Andrzej Nowak, Lan Bui-Wrzosinska, Larry Liebovitch, Katharina Kugler, Andrea Bartoli, 2014-07-08 Conflict is inherent in virtually every aspect of human relations from sport to parliamentary democracy from fashion in the arts to paradigmatic challenges in the sciences and from economic activity to intimate relationships Yet it can become among the most serious social problems humans face when it loses its constructive features and becomes protracted over time with no obvious means of resolution This book addresses the subject of intractable social conflict from a new vantage point Here these types of conflict represent self organizing phenomena emerging quite naturally from the ongoing dynamics in human interaction at any scale from the interpersonal to the international Using the universal language and computational framework of nonlinear dynamical systems theory in combination with recent insights from social psychology intractable conflict is understood as a system locked in special attractor states that constrain the thoughts and actions of the parties to the conflict The emergence and maintenance of attractors for conflict can be described by means of formal models that incorporate the results of computer simulations experiments field research and archival analyses Multi disciplinary research reflecting these approaches provides encouraging support for the dynamical systems perspective Importantly this text presents new views on conflict resolution In contrast to traditional approaches that tend to focus on basic short lived cause effect relations the dynamical perspective

emphasizes the temporal patterns and potential for emergence in destructive relations Attractor deconstruction entails restoring complexity to a conflict scenario by isolating elements or changing the feedback loops among them The creation of a latent attractor trades on the tendency toward multi stability in dynamical systems and entails the consolidation of incongruent positive elements into a coherent structure In the bifurcation scenario factors are identified that can change the number and types of attractors in a conflict scenario The implementation of these strategies may hold the key to unlocking intractable conflict creating the potential for constructive social relations

The Dynamic Perspective in Personality and Social Psychology Robin R. Vallacher, Stephen John Read, Andrzej Nowak, 2002-11-01 Recent years have witnessed the ascendance of a new way to conceptualize and investigate the nature of dynamism at different levels of psychological reality Areas of inquiry as diverse as cognitive neuroscience developmental psychology organizational behavior and political sociology are being reframed in terms that allow rigorous and precise insight into basic dynamic processes There are signs that this new approach to dynamics is emerging as a potentially integrative paradigm for personality and social psychology as well This special issue highlights this new paradigm and illustrates its relevance to a broad spectrum of topics in personality and social psychology

The Atlas of Social Complexity Brian Castellani, Lasse Gerrits, 2024-06-05 Embark on a riveting journey through the study of social complexity with The Atlas of Social Complexity Over three decades of scientific exploration unfold unravelling the enigmatic threads that compose the fabric of society From the dance of bacteria to human machine interactions to the ever shifting dynamics of power in social networks this Atlas maps the evolution of our understanding of social complexity

Qualitative Theory of Dynamical Systems, Tools and Applications for Economic Modelling Gian Italo Bischi, Anastasiia Panchuk, Davide Radi, 2016-06-02 The book presents the lectures delivered during a short course held at Urbino University in summer 2015 on qualitative theory of dynamical systems included in the activities of the COST Action IS1104 The EU in the new economic complex geography models tools and policy evaluation It provides a basic introduction to dynamical systems and optimal control both in continuous and discrete time as well as some numerical methods and applications in economic modelling Economic and social systems are intrinsically dynamic characterized by interdependence nonlinearity and complexity and these features can only be approached using a qualitative analysis based on the study of invariant sets equilibrium points limit cycles and more complex attractors together with the boundaries of their basins of attraction which requires a trade off between analytical geometrical and numerical methods Even though the early steps of the qualitative theory of dynamical systems have been in continuous time models in economic and social modelling discrete time is often used to describe event driven often decision driven evolving systems The book is written for Ph D and master s students post doctoral fellows and researchers in economics or sociology and it only assumes a basic knowledge of calculus However it also suggests some more advanced topics

Nonlinear Dynamical Systems Analysis for the Behavioral Sciences Using Real Data Stephen J. Guastello, Robert A.M. Gregson, 2016-04-19 Although its roots can be traced to the 19th century progress in the study of nonlinear dynamical systems has taken off in the last 30 years While pertinent source material exists it is strewn about the literature in mathematics physics biology economics and psychology at varying levels of accessibility A compendium research methods reflect Handbook of Self-Regulation Monique Boekaerts, Paul R Pintrich, Moshe Zeidner, 2005-07-25 The Handbook of Self Regulation represents state of the art coverage of the latest theory research and developments in applications of self regulation research Chapters are of interest to psychologists interested in the development and operation of self regulation as well as applications to health organizational clinical and educational psychology This book pulls together theory research and applications in the self regulation domain and provides broad coverage of conceptual methodological and treatment issues In view of the burgeoning interest and massive research on various aspects of self regulation the time seems ripe for this Handbook aimed at reflecting the current state of the field The goal is to provide researchers students and clinicians in the field with substantial state of the art overviews reviews and reflections on the conceptual and methodological issues and complexities particular to self regulation research Coverage of state of the art in self regulation research from different perspectives Application of self regulation research to health clinical organizational and educational psychology Brings together in one volume research on self regulation in different subdisciplines Most comprehensive and penetrating compendium of information on self regulation from multi disciplinary perspectives

Dynamic Process Methodology in the Social and Developmental Sciences Jaan Valsiner, Peter C. M. Molenaar, Maria C.D.P. Lyra, Nandita Chaudhary, 2009-07-09 All psychological processes like biological and social ones are dynamic Phenomena of nature society and the human psyche are context bound constantly changing and variable This feature of reality is often not recognized in the social sciences where we operate with averaged data and with homogeneous stereotypes and consider our consistency to be the cornerstone of rational being Yet we are all inconsistent in our actions within a day or from one day to the next and much of such inconsistency is of positive value for our survival and development Our inconsistent behaviors and thoughts may appear chaotic yet there is generality within this highly variable dynamic The task of scientific methodologies qualitative and quantitative is to find out what that generality is It is the aim of this handbook to bring into one framework various directions of construction of methodology of the dynamic processes that exist in the social sciences at the beginning of the 21st century This handbook is set up to bring together pertinent methodological scholarship from all over the world and equally from the quantitative and qualitative orientations to methodology In addition to consolidating the pertinent knowledge base for the purposes of its further growth this book serves the major educational role of bringing practitioners students researchers and professionals interested in applications the state of the art know how about how to think about extracting evidence from single cases and about the formal mathematical statistical tools to use for these purposes

Analysis of Dynamic Psychological Systems H.E. Fitzgerald, R.L. Levine, 2013-03-08 Drawing on sources from a wide range of disciplines this first volume of a two volume tutorial on systems theory focuses on non linear dynamical techniques for analysis of feedback processes information flow decision making control theory and modeling of human behavioral systems

Computational Social Psychology Robin R. Vallacher, Stephen J. Read, Andrzej Nowak, 2017-05-25 Computational Social Psychology showcases a new approach to social psychology that enables theorists and researchers to specify social psychological processes in terms of formal rules that can be implemented and tested using the power of high speed computing technology and sophisticated software This approach allows for previously infeasible investigations of the multi dimensional nature of human experience as it unfolds in accordance with different temporal patterns on different timescales In effect the computational approach represents a rediscovery of the themes and ambitions that launched the field over a century ago The book brings together social psychologists with varying topical interests who are taking the lead in this redirection of the field Many present formal models that are implemented in computer simulations to test basic assumptions and investigate the emergence of higher order properties others develop models to fit the real time evolution of people s inner states overt behavior and social interactions Collectively the contributions illustrate how the methods and tools of the computational approach can investigate and transform the diverse landscape of social psychology

Biographical Ruptures and Their Repair Amrei C. Joerchel, Gerhard Benetka, 2014-11-01 Biographical ruptures and their repairs Cultural transitions in development represents the efforts of bridging theoretical methodological and practice oriented issues revolving around the notion of biographical ruptures and their repairs The aim is to bring novel understandings from cultural psychological perspectives to the debate of what it means to be a developing human being in an ever changing world Contrary to mainstream psychology ruptures and repairs are here not necessarily understood as a personal experience which must be overcome through various coping strategies Rather ruptures are understood as experiences which necessarily emerge out of the complex interrelatedness of intra psychological inter personal and societal processes Moving along these different levels of analysis each of the 13 chapters of this book contributes to the general cultural psychological understanding of ruptures from their own particular standpoint The notion of ruptures and their repairs are discussed from such differing standpoints such as classical developmental psychological theories and challenges to such developmental approaches They are discussed in relation to racial interpellations using the documentary method and social representations theory On the object level ruptures are pointed out within popular music videos and from a Ganzheitspsychological approach and others The current book thus does not only represent a conglomerate of various theoretical methodological or practice oriented approaches to ruptures and their repairs each adding with their own expertise to a better understand of the phenomenon in its whole It also demonstrated a lively debate between leading specialists and practitioners from different disciplines and countries Theoretical and methodological issues as well as ethical and moral ones are each discussed from their own cultural

psychological viewpoint This book will interest practitioners scientists and students or anyone who is interested in biographical rupture and their repairs from a cultural psychological developmental social psychological or psychotherapeutic viewpoint

Small Groups as Complex Systems Holly Arrow, Joseph E. McGrath, Jennifer L. Berdahl, 2000-03-21 The emphasis on change at many levels of organization is critically important as is the first attempt to integrate sophisticated theory and research in organization psychology e g Gersick Hackman with social psychological models of development such as Moreland and Levine Reuben M Baron Emeritus University of Connecticut Arrow McGrath and Berdahl s Small Groups as Complex Systems will change the way you think about groups the way you think about research and even the way you think about science Donelson R Forsyth Psychology Virginia Commonwealth U The book is excellent one of those very rare works that will have substantial impact on the field I would use the book without hesitation in any advanced graduate seminar dealing with groups Donelson R Forsyth Psychology Virginia Commonwealth U A conceptually elegant analysis of groups as systems Although the systems approach has been growing more influential in various fields of social psychology in the last ten years no one has put forward a definitive analysis that applies with fidelity the general systems approach to group processes McGrath and his colleagues fill that gap not by paying lip service to popular scientific concepts such as recursive causality open systems attractors and complexity theory but by fully integrating these concepts into their no nonsense analysis of such group level processes as formation task performance composition development and termination Empirical work is folded into the theoretical mix along the way but the focus is unrelentingly conceptual with the result that the authors deliver on their promise of developing a powerful unified theory of group

dynamics Donelson R Forsyth Psychology Virginia Commonwealth U Theirs is an ambitious book They have profound ramifications for experimental social psychology It is worth mentioning that AMD Arrow McGrath and Berdahl list an ethnographic approach which often implies the adoption of hermeneutic and semiotic methods a hallmark of the anti Enlightenment tradition in psychology as a possible way forward Yoshihisa Kashima American Journal of Psychology What are groups How do they behave Arrow McGrath and Berdahl answer these questions by developing a general theory of small groups as complex systems Basing their theory on concepts distilled from general systems theory dynamical systems theory and complexity and chaos theory they explore groups as adaptive dynamic systems that are driven by interactions among group members as well as between the group and its embedding contexts In addition they consider not only the group s members and their distribution of attributes but also the group s tasks and technology in order to understand how those members tasks and tools are intertwined coordinated and adjusted Throughout the book the authors focus our attention on relationships among people tools and tasks that are activated by a combination of individual and collective purposes and goals that change and evolve as the group interacts over time

Complex Dynamical Systems in Education Matthijs Koopmans,Dimitrios Stamovlasis,2016-02-19 This book capitalizes on the developments in dynamical systems and education by presenting some of the most recent advances in this area in seventeen non overlapping chapters The first half of the book discusses the conceptual framework of complex dynamical systems and its applicability to educational processes The second half presents a set of empirical studies that that illustrate the use of various research methodologies to investigate complex dynamical processes in education and help the reader appreciate what we learn about dynamical processes in education from using these approaches
