showing population as a defining element for the transformation but can show any quantitative geospatial data such as wealth rainfall or even the environmental conditions of the oceans The new maps also work at various scales from a global perspective down to the scale of urban environments The gridded cartogram technique is proposed as a new global and local map projection that is a viable and versatile alternative to other conventional map projections The maps based on this technique open up a wide range of potential new applications to rediscover the diverse geographies of the world They have the potential to allow us to gain new perspectives through detailed cartographic depictions
