Krohn, 2007 In graphic novel format tells the story of Jonas Salk s involvement in the development of a polio vaccine Provided by publisher *The Renaissance of Science* Albert Martini, 2015-05-27 The Magnificent Scientists and their Fabulous Accomplishments A Fantastic Dream and Journey into the Past Present and Future In the World of Biology **Jonas Salk, Revised Edition** Victoria Sherrow, 2009 Jonas Salk Revised Edition describes this respected immunologist s medical research and his lifelong efforts to promote scientific and human progress on a global scale By chronicling Salk s story and his fight against polio this engrossing book shows how scientists build upon the achievements of others while bringing their own perspective to the challenges they face in the laboratory and in the field This revised edition brings readers up to date regarding Salk s final years and the current work of the Salk Institute It also describes the global campaign to eradicate polio from the planet since the fight against this disease has continued in developing nations **Vaccination** Erik Richardson, 2017-07-15 Contemporary vaccination is rooted in centuries of scientific discovery Some scholars believe that as far back as 1000 CE Chinese Taoists used variolation or inoculation to control the spread of disease In 1796 Edward Jenner developed a smallpox vaccine that ranks as one of the most important scientific breakthroughs of all time This book explains how Jenner made his discovery based on the achievements of those who came before him how vaccination works and the many ways that vaccines continue to shape science and generate controversy today *They Were Giants* 2007 Patrick Yearly, 2007 Many people make significant contributions to society outside of the spotlight Patrick Yearly profiles over 300 people whose names are not well known but life s work has made a lasting impact From the fields of business medicine science and sports to the arts education and many more he covers a wide range of accomplishments that have made a profound impact on everyday life **Encyclopedia of Science and Technology Communication** Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others

fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics
