Cellular Responses To Stress Princeton Legacy Library:

Cellular Responses to Stress C. P. Downes, C. R. Wolf, D. P. Lane, 2014-07-14 Cellular Responses to Stress brings together a group of scientists who work on different but interrelated aspects of cellular stress responses. The book provides state of the art information on the wide spectrum of ways in which cells can respond to different forms of stress induced by chemicals, oxidants and DNA damaging agents. Mechanisms are described that involve altered uptake and efflux of chemical agents, intracellular detoxification and DNA damage responses. Many of these changes trigger a cascade of reactions mediated by stress activated signaling pathways which have the capacity to determine whether a cell will survive or die. The spectrum of topics covered in this book aims to provide a broad overview of our current knowledge of the different forms of adaptive response systems. It is hoped that this text will stimulate further research to establish the relative cellular role of specific response pathways and will enable us to gain a deeper understanding of the mechanisms that allow cells to live or die. This book will be valued by university researchers at all levels, industrial scientists in the pharmaceutical and biotechnology industries and clinical researchers. Originally published in 1999, The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

This volume explores the stress concept as Hans Selye originally described it. A variety of approaches to stress research are represented including molecular stress, stress proteins, stress and cellular functions, stress in plants, stress at the level of the organism, stress in medicine and psychosocial stress. Specifically, this volume comprises contributions on heat shock proteins and their expression, the stress and cellular functions such as stress kinases and genomic stability, plant stress, heavy metal inflammation and oxidative stress at the level of the organism, the stress of infections and the immune response, stress and longevity and psychosocial stress. The purpose of this approach is to stress the need for understanding the molecular data at the systems level. The variety of research that now exists in this scientific area is truly a legacy of Hans Selye's vision which represented the multidisciplinary view at its best.
