to Red Hat Enterprise Linux RHEL. It acts as a free alternative to Red Hat's commercial Linux offering with only a change in the branding. A high performance cluster consists in a group of computers that work together as one set parallel hence minimizing or eliminating the downtime of critical services and enhancing the performance of the application. Starting with the basic principles of clustering you will learn the necessary steps to install a cluster with two CentOS 7 servers. We will then set up and configure the basic required network infrastructure and clustering services. Further you will learn how to take a proactive approach to the split brain issue by configuring the failover and fencing of the cluster as a whole and the quorum of each node individually. Further we will be setting up HAC and HPC clusters as a web server and a database server. You will also master the art of monitoring performance and availability identifying bottlenecks and exploring troubleshooting techniques. At the end of the book you will review performance tuning techniques for the recently installed cluster test performance using a payload simulation and learn the necessary skills to ensure that the systems and the corresponding resources and services are being utilized to their best capacity.

**Style and approach** An easy to follow and step by step guide with hands on instructions to set up real world simple cluster scenarios that will start you on the path to building more complex applications on your own.
