Waubant,2011-03-17 Although multiple sclerosis and other disorders of myelin formation and repair are most commonly associated with adults they can also occur in infants children and adolescents Up to 5 percent of those with MS experience symptoms before the age of 18 and the number of cases diagnosed is rising There is a lack of awareness about these diseases in childhood however even amongst pediatric neurologists and MS specialists Demyelinating Disorders of the Central Nervous System in Childhood provides comprehensive coverage of these diseases highlighting throughout the differences between management in childhood and in adults With sections dedicated to the diagnosis course treatment and biology of pediatric MS detailed chapters on other childhood demyelinating diseases including acute disseminated encephomyelitis optic neuritis acute complete transverse myelitis and neuromyelitis optica are also provided Essential reading for pediatric neurologists and MS specialists this book will also be valuable reading for adult neurologists and pediatricians

The Neurologic Diagnosis Jack N. Alpert,2018-11-27 An introductory text that transitions into a moderately advanced case based analysis of neurologic disorders and diseases this book emphasizes how to simplify the process of making a neurologic diagnosis Medical students and residents are often intimidated by a deluge of data perception of anatomic complexity extensive differential diagnoses and often have no organized structure to follow Diagnostic methods of general medicine are not applicable Indeed neurology is a unique specialty since it requires the intermediary step of an anatomic diagnosis prior to proffering a differential diagnosis Yet the required knowledge of neuroanatomy need not be profound for the student or resident who will not specialize in neurology or neurosurgery The Neurologic Diagnosis A Practical Bedside Approach 2nd Edition is primarily directed to neurology and neurosurgery residents but it will be useful for medical and family practice residents who will discover that a great percentage of their patients have neurologic symptoms A one month neurology rotation out of four years of medical school is not sufficient to make a cogent neurologic diagnosis The aim of this concise practical book which includes an in depth video of how to perform a neurologic examination is to facilitate the process of establishing a neuroanatomic diagnosis followed by a rigorous analysis of symptoms and signs to reach a well thought out differential diagnosis Focused and succinct this book is an invaluable resource for making a lucid neurologic diagnosis
