Preparing for an Influenza Pandemic Institute of Medicine, Board on Health Sciences Policy, Committee on Personal Protective Equipment for Healthcare Workers During an Influenza Pandemic, 2007-12-28 During an influenza pandemic healthcare workers will be on the front lines delivering care to patients and preventing further spread of the disease As the nation prepares for pandemic influenza multiple avenues for protecting the health of the public are being carefully considered ranging from rapid development of appropriate vaccines to quarantine plans should the need arise for their implementation One vital aspect of pandemic influenza planning is the use of personal protective equipment PPE the respirators gowns gloves face shields eye protection and other equipment that will be used by healthcare workers and others in their day to day patient care responsibilities However efforts to appropriately protect healthcare workers from illness or from infecting their families and their patients are greatly hindered by the paucity of data on the transmission of influenza and the challenges associated with training and equipping healthcare workers with effective personal protective equipment Due to this lack of knowledge on influenza transmission it is not possible at the present time to definitively inform healthcare workers about what PPE is critical and what level of protection this equipment will provide in a pandemic The outbreaks of severe acute respiratory syndrome SARS in 2003 have underscored the importance of protecting healthcare workers from infectious agents The surge capacity that will be required to reduce mortality from a pandemic cannot be met if healthcare workers are themselves ill or are absent due to concerns about PPE efficacy The IOM committee determined that there is an urgent need to address the lack of preparedness regarding effective PPE for use in an influenza pandemic

Preparing for an Influenza Pandemic Personal Protective Equipment for Healthcare Workers identifies that require expeditious research and policy action

- 1 Influenza transmission research should become an immediate and short term research priority so that effective prevention and control strategies can be developed and refined The current paucity of knowledge significantly hinders prevention efforts
- 2 Employer and employee commitment to worker safety and appropriate use of PPE should be strengthened Healthcare facilities should establish and promote a culture of safety
- 3 An integrated

effort is needed to understand the PPE requirements of the worker and to develop and utilize innovative materials and technologies to create the next generation of PPE capable of meeting these needs *On Your First Attempt, Become a Certified Safety Professional* Sami Ullah Rajput, 2023-02-27 In gratitude to those who inspired him contributed research and provided data author wishes to express his gratitude Those who have supported contributed or participated in this project are officially acknowledged We would not have been able to complete this project without your support and involvement This book contains several useful resources and sources including the Canadian Centre for Occupational Health and Safety the Occupational Safety and Health Administration the National Safety Council the National Fire Protection Association and many others Among them are the Health and Safety Executive the Board of Certified Safety Professionals the American Conference of Governmental Industrial Hygienists and the Board of Canadian Registered Safety Professionals The references section at the end of each chapter identifies all sources whenever possible Please let us know by email at safety_expert2058@gmail.com if the author has missed any references or acknowledgments so we can make the necessary changes Being a member of the safety community the author practices safety ethics to the fullest extent possible By raising people's knowledge the book aims to help safety professionals achieve highly recognized qualifications at their very first attempt
