National Transportation Safety Board,2008 On April 12 2007 about 0043 eastern daylight time a Bombardier Canadair Regional Jet CRJ CL600 2B19 N8905F operated as Pinnacle Airlines flight 4712 ran off the departure end of runway 28 after landing at Cherry Capital Airport TVC Traverse City Michigan There were no injuries among the 49 passengers including 3 lap held infants and 3 crewmembers and the aircraft was substantially damaged Weather was reported as snowing The airplane was being operated under the provisions of 14 Code of Federal Regulations Part 121 and

had departed from Minneapolis St Paul International Wold Chamberlain Airport Minneapolis Minnesota about 2153 central daylight time Instrument meteorological conditions prevailed at the time of the accident flight which operated on an instrument flight rules flight plan The National Transportation Safety Board NTSB determines that the probable cause of this accident was the pilots decision to land at TVC without performing a landing distance assessment which was required by company policy because of runway contamination initially reported by TVC ground operations personnel and continuing reports of deteriorating weather and runway conditions during the approach This poor decision making likely reflected the effects of fatigue produced by a long demanding duty day and for the captain the duties associated with check airman functions Contributing to the accident were 1 the Federal Aviation Administration pilot flight and duty time regulations that permitted the pilots long demanding duty day and 2 the TVC operations supervisor s use of ambiguous and unspecific radio phraseology in providing runway braking information P ix

Stratospheric Flight Andras Sóbester,2011-06-28 In this book Dr Andras Sobester reviews the science behind high altitude flight He takes the reader on a journey that begins with the complex physiological questions involved in taking humans into the death zone How does the body react to falling ambient pressure Why is hypoxia oxygen deficiency associated with low air pressure so dangerous and why is it so difficult to design out of aircraft why does it still cause fatalities in the 21st century What cabin pressures are air passengers and military pilots exposed to and why is the choice of an appropriate range of values such a difficult problem How do high altitude life support systems work and what happens if they fail What happens if cabin pressure is lost suddenly or even worse slowly and unnoticed The second part of the book tackles the aeronautical problems of flying in the upper atmosphere What loads does stratospheric flight place on pressurized cabins at high altitude and why are these difficult to predict What determines the maximum altitude an aircraft can climb to What is the coffin corner and how can it be avoided The history of aviation has seen a handful of airplanes reach altitudes in excess of 70 000 feet what are the extreme engineering challenges of climbing into the upper stratosphere Flying high makes very high speeds possible what are the practical limits The key advantage of stratospheric flight is that the aircraft will be

above the weather but is this always the case Part three of the book investigates the extreme atmospheric conditions that may be encountered in the upper atmosphere How high can a storm cell reach and what is it like to fly into one How frequent is high altitude clear air turbulence what causes it and what are its effects on aircraft The stratosphere can be extremely cold how cold does it have to be before flight becomes unsafe What happens when an aircraft encounters volcanic ash at high altitude Very high winds can be encountered at the lower boundary of the stratosphere what effect do they have on aviation Finally part four looks at the extreme limits of stratospheric flight How high will a winged aircraft will ever be able to fly What are the ultimate altitude limits of ballooning What is the greatest altitude that you could still bail out from And finally what are the challenges of exploring the stratospheres of other planets and moons The author discusses these and many other questions the known knowns the known unknowns and the potential unknown unknowns of stratospheric flight through a series of notable moments of the recent history of mankind s forays into the upper atmospheres each of these incidents accidents or great triumphs illustrating a key aspect of what makes stratospheric flight aviation at the limit Popular Aviation ,2006
