Crop Wild Relatives And Climate Change:

Crop Wild Relatives and Climate Change Robert J. Redden, Shyam Singh Yadav, Nigel Maxted, Mohammad Ehsan Dulloo, Luigi Guarino, Paul Smith, 2015-09-01 Two major challenges to continued global food security are the ever increasing demand for food products and the unprecedented abiotic stresses that crops face due to climate change Wild relatives of domesticated crops serve as a reservoir of genetic material with the potential to be used to develop new improved varieties of crops Crop Wild Relative and Climate Change integrates crop evolution breeding technologies and biotechnologies improved practices and sustainable approaches while exploring the role wild relatives could play in increasing agricultural output Crop Wild Relative and Climate Change begins with overviews of the impacts of climate change on growing environments and the challenges that agricultural production face in coming years and decades Chapters then explore crop evolution and the potential for crop wild relatives to contribute novel genetic resources to the breeding of more resilient and productive crops Breeding technologies and biotechnological advances that are being used to incorporate key genetic traits of wild relatives into crop varieties are also covered There is also a valuable discussion on the importance of conserving genetic resources to ensure continued successful crop production A timely resource Crop Wild Relative and Climate Change will be an invaluable resource for the crop science community for years to come **Crop Wild Relatives , Combating Global Warming** Kodoth Prabhakaran Nair, 2019 This book critically examines the environmental hazards posed by global warming with regard to future food security which will depend on a combination of stresses both biotic and abiotic imposed by climate change variability of weather within a growing season and the development of cultivars that are more sensitive to different ambient conditions Furthermore the ability to develop effective adaptive strategies which allow these cultivars to express their genetic potential under changing climate conditions will be essential In turn the book investigates those plant species which are very closely related to field crops and have the potential to contribute beneficial traits for crop improvement e g resistance to a wide range of biotic and abiotic stresses enriching the gene pool and ultimately leading to enhanced plant yield known as Crop Wild Relatives CWRs CWRs hold tremendous potential to sustain and enhance global food security contributing to human well being Accordingly their development characterization and conservation in crop breeding programs have assumed great practical importance Professor Kodoth Prabhakaran Nair is an internationally acclaimed agricultural scientist with over three decades of experience in Europe Africa and Asia holding some of the most prestigious academic positions including the National Chair of the Science Foundation The Royal Society Belgium A Senior Fellow of the world renowned Alexander von Humboldt Research Foundation of The Federal Republic of Germany he is best known globally for having developed a revolutionary soil management technique known as The Nutrient Buffer Power Concept which while questioning the scientific fallacies of the highly soil extractive farming euphemistically known as the green revolution has opened up an alternative path for sensible and scientific soil management Nordic Crop Wild Relative

conservation: Anna Palmé, Heli Fitzgerald, Jens Weibull, Kristina Bjureke, Kaija Eisto, Dag Endresen, Jenny Hagenblad, Marko Hyvärinen, Elina Kiviharju, Birgitte Lund, Morten Rasmussen, Hjörtur Þorbjörnsson, 2019-07-08 The report summarizes results from a cooperation among all the Nordic countries during the period 2015-2019 two projects The work has focused on the conservation of Crop Wild Relatives CWR i.e. wild plant species closely related to crops They are of special importance to humanity since traits of potential value for food security and climate change adaptation can be transferred from CWR into crops The projects represent the first joint action on the Nordic level regarding in situ conservation of CWR Substantial progress has been made regarding CWR conservation planning including development of a Nordic CWR checklist and identification of suitable sites for CWR conservation A set of recommended future actions was developed with the most important one being initiation of active in situ conservation of CWR in all Nordic countries

Crop Adaptation to Climate Change Shyam Singh Yadav, Robert J. Redden, Jerry L. Hatfield, Hermann Lotze-Campen, Anthony E. Hall, 2011-10-25 A major task of our time is to ensure adequate food supplies for the world's current population now nearing 7 billion in a sustainable way while protecting the vital functions and biological diversity of the global environment The task of providing for a growing population is likely to be even more difficult in view of actual and potential changes in climatic conditions due to global warming and as the population continues to grow Current projections suggest that the world's temperatures will rise 1.8-4.0 by 2100 and population may reach 8 billion by the year 2025 and some 9 billion by mid century after which it may stabilize This book addresses these critical issues by presenting the science needed not only to understand climate change effects on crops but also to adapt current agricultural systems particularly in regard to genetics to the changing conditions Crop Adaptation to Climate Change covers a spectrum of issues related to both crops and climatic conditions The first two sections provide a foundation on the factors involved in climate stress assessing current climate change by region and covering crop physiological responses to these changes The third and final section contains chapters focused on specific crops and the current research to improve their genetic adaptation to climate change Written by an international team of authors Crop Adaptation to Climate Change is a timely look at the potentially serious consequences of climate change for our global food supply and is an essential resource for academics researchers and professionals in the fields of crop science agronomy plant physiology and molecular biology crop consultants and breeders as well as climate and food scientists
