Vessel Health and Preservation: The Right Approach for Vascular Access Nancy L. Moureau, 2024-12-28 This second edition offers updated and revised information on vessel health and preservation VHP It presents a model of care and systematic application of vascular access and administration of intravenous treatment to show how establishing and maintaining a route to the bloodstream with optimal methods is essential for patients in acute care today This model concept was first published in poster form in 2008 and in JVA in 2012 which has received a great deal of attention especially in the US UK and Australia Until now little thought has been given to an intentional process to guide selection insertion and management of vascular access devices VADs and by default actions are based on crisis management

when a quickly selected VAD fails The book details how VHP establishes a framework or pathway model for each step of the patient experience intentionally guiding improving and eliminating risk when possible The evidence points to the fact that reducing fragmentation establishing a pathway and teaching the process to all stakeholders reduces complications with intravenous therapy improves efficiency and diminishes cost As such this book has become a strong point of reference appealing to vascular access specialists bedside nurses physicians and other health professionals Few authoritative guides provide the depth and descriptive evidence included in this VHP model of care suitable for hospital administrators directors educators and others to apply within their services

Totally Implantable Venous Access Devices Isidoro Di Carlo, Roberto Biffi, 2012-02-01 Since their first application in 1982 Totally Implantable Venous Access Devices TIVADs have become increasingly important in the clinical practice as more intensive chemotherapy and parenteral treatments have come into use At this time there is objective evidence that TIVADs are a safe effective strategy for long term venous access they play a significant role throughout the management of the oncology patient as they are needed in the initial phases for active treatments as well as in the last stages for palliative measures making possible repeated administration of chemotherapeutic vesicant agents nutrients antibiotics analgesics and blood products According to a number of prospective studies use of TIVADs is associated with a significant complication rate 10% to 25% of all patients Evidence based data support that most complications are directly related to inappropriate technique of placement and or nursing care sometimes leading to TIVAD loss significant morbidity increased duration of hospitalization and additional medical cost A group of world renowned experts both in the clinical and research fields contributed to this volume whose aim is to provide clinicians nurses and medical students with a multidisciplinary full update on these devices as long term central venous access can no be longer considered a routine matter and serious complications can be maintained at a very low level only if strict adherence to a well defined protocol of surgical technique and of catheter care is maintained
