Welcome to Teaching! Douglas Fisher, Nancy Frey, Taryl Hansen, 2024-01-24 You've made the incredible decision to become an educator because you want to impact the learning lives of young people. Thank you and welcome! We welcome you to this amazing profession with open arms and with an arsenal of experience and essential tools, strategies, and lessons to help you establish a successful and satisfying teaching career. We wanted to make it easier for you to learn and practice these techniques that research shows increase student learning. To do so, we also considered cognitive psychology research that tells us that images and illustrations can help strengthen communication and our own understanding. This helped us develop the unique format for this book: part hands-on playbook, part professional book, and all highly illustrated. It is designed to make complicated concepts more digestible and memorable. This extensive guide for new teachers provides everything you need to impact learning from your first day on, including: How to plan powerful learning experiences that ensure student engagement; 22 step-by-step learning strategies for any grade and any subject; Detailed guidance for developing formative and summative assessments; 30 classroom videos demonstrating the techniques and strategies in action. Leveraging the Potentials of Peer Learning Sarah Oeste-Reiß, 2019-01-23 The digitization changes qualification demands of knowledge workers and opens new forms of collaboration. Solutions are required for enhancing acquisition and transfer of knowledge as well as training professional skills such as critical thinking, communication, and cooperation. Peer Learning (PL) provides potentials for coping with these demands. However, it faces practical challenges as its reusability is low; collaboration expertise is required and lacks leveraging digitization potentials. In contrast, the body of Collaboration Engineering (CE) literature provides insights as it is an approach to designing collaborative work practices for high-value recurring tasks and deploying those to practitioners to execute for themselves without collaboration expertise. In this light, three research questions shape the structure of the thesis. First, the thesis shows an analysis of the application domain and develops a teaching/learning approach for creating conditions for PL in large-scale lectures. Second, it proposes an approach to designing reference processes for enhancing PL. Third, it presents three studies that illustrate the design, instantiation, and evaluation of reference processes for enhancing PL in the field. As a methodological approach, the thesis uses Design Science and develops, instantiates, and evaluates reusable reference processes for enhancing PL.
