Coding Literacy Annette Vee,2017-07-28 How the theoretical tools of literacy help us understand programming in its historical social and conceptual contexts The message from educators the tech community and even politicians is clear everyone should learn to code To emphasize the universality and importance of computer programming promoters of coding for everyone often invoke the concept of literacy drawing parallels between reading and writing code and reading and writing text In this book Annette Vee examines the coding as literacy analogy and argues that it can be an apt rhetorical frame The theoretical tools of literacy help us understand programming beyond a technical level and in its historical social and conceptual contexts Viewing programming from the perspective of literacy and literacy from the perspective of programming she argues shifts our understandings of both Computer programming becomes part of an array of communication skills important in everyday life and literacy augmented by programming becomes more capacious Vee examines the ways that programming is linked with literacy in coding literacy campaigns considering the ideologies that accompany this coupling and she looks at how both writing and programming encode and distribute information She explores historical parallels between writing and programming using the evolution of mass textual literacy to shed light on the trajectory of code from military and government infrastructure to large scale businesses to personal use Writing and coding were institutionalized domesticated and then established as a basis for literacy Just as societies demonstrated a literate mentality regardless of the literate status of individuals Vee argues a computational mentality is now emerging even though coding is still a specialized skill **Why Rural Schools Matter** Mara Casey Tieken,2014 *Why Rural Schools Matter*

**The Rebirth of Education** Lant Pritchett, 2013-09-30 Despite great progress around the world in getting more kids into schools too many leave without even the most basic skills In India s rural Andhra Pradesh for instance only about one in twenty children in fifth grade can perform basic arithmetic The problem is that schooling is not the same as learning In *The Rebirth of Education* Lant Pritchett uses two metaphors from nature to explain why The first draws on Ori Brafman and Rod Beckstrom s book about the difference between centralized and decentralized organizations The Starfish and the Spider Schools systems tend to be centralized and suffer from the limitations inherent in top down designs The second metaphor is the concept of isomorphic mimicry Pritchett argues that many developing countries superficially imitate systems that were successful in other nations much as a nonpoisonous snake mimics the look of a poisonous one Pritchett argues that the solution is to allow functional systems to evolve locally out of an environment pressured for success Such an ecosystem needs to be open to variety and experimentation locally operated and flexibly financed The only main cost is ceding control the reward would be the rebirth of education suited for today s world
