Cerebral Vasospasm Cerebral Vasospasm:

Cerebral Vasospasm R.W. Seiler,H.-J. Steiger,2012-12-06 Cerebral vasospasm remains a major clinical problem in patients with subarachnoid hemorrhage Neuroprotection with calcium antagonists hemodynamic therapy and interventional angioplasty have an established role in the management of this disease but an effective single drug for prevention or treatment of the vasospasm is still lacking This book contains selected contributions to the 7th International Conference on Cerebral Vasospasm held in Interlaken Switzerland in June 2000 Part I of the book concentrates on basic science and experimental vasospasm The molecular biology of vasospasm the role of endothelin and nitric oxide as well as the potential of gene therapy are presented Part II concentrates on the diagnosis and therapy of clinical vasospasm New diagnostic tools are presented including diffusion and perfusion weighted MRI MR spectroscopy and microdialysis with metabolic monitoring Leaders in the field discuss the current indications and results of endovascular treatment of cerebral vasospasm The latter chapters are devoted to the treatment of clinical vasospasm with new drugs and to the prevention and treatment of ischemic deficits with neuroprotective drugs and hemodynamic therapy The book provides the state of the art in the major subjects of the molecular biology of vasoconstriction and experimental vasospasm as well as the diagnosis and treatment of clinical vasospasm

Subarachnoid Hemorrhage Donald P. J. Boisvert, 1978 Regional cerebral blood flow measurements intra arterial Xenon technique and cerebral angiography were performed in two series of macaque monkeys Cerebral blood flow autoregulatory and arterial caliber responses to increases in mean arterial blood pressure MaBP were studied before and during the acute period following induced subarachnoid hemorrhage or mock subarachnoid hemorrhage subarachnoid injection of artificial cerebrospinal fluid in rhesus monkeys A comparative study of the acute effects of subarachnoid injections of artificial cerebrospinal fluid serotonin and blood on regional cerebral blood flow cerebral arterial caliber neurological status and cerebral vessel ultrastructure was carried out in cynomolgous monkeys Regional cerebral blood flow autoregulatory responses to increases in MaBP were impaired following subarachnoid hemorrhage Autoregulatory impairment was associated with loss of cerebral arterial vasomotor tone Mock subarachnoid hemorrhage had no effect on autoregulation or vasomotor tone Subarachnoid injection of blood in cynomolgous monkeys caused a decrease in cerebral blood flow lasting less than one hour and moderate vasospasm which lasted at least three hours In contrast subarachnoid injection of artificial cerebrospinal fluid had no effect on these parameters Subarachnoid injection of a serotonin solution at physiological concentrations as determined by in vitro bioassay was also made without effect on cerebral blood flow or arterial caliber Higher 10x serotonin concentrations caused a cerebral blood flow response similar to that obtained with blood However the cerebral vasospasm induced was of shorter duration than that obtained with blood No significant neurological effect of these subarachnoid injections was observed during the 16 to 18 hour period following reversal of anesthesia Animals with moderate vasospasm demonstrated no ultrastructural changes in cerebral arteries arterioles and capillaries These results support the following conclusions 1 Cerebral flow regulatory mechanisms play an important role in determining cerebral perfusion status following subarachnoid hemorrhage 2 Moderate vasospasm does not impair cerebral perfusion in the presence of normal cerebral perfusion pressure and arterial blood gases 3 Unphysiologically high concentrations of serotonin are required to produce significant effects on the cerebral circulation 4 Development of post SAH cerebral edema is at least partly due to the duration of intracranial hypertension which occurs during hemorrhage from a ruptured cerebral aneurysm Clinical

Evidence-based Management of Stroke José Biller, José M Ferro, 2011-06-01 Winner of a HIGHLY COMMENDED AWARD in the Neurology category of the 2012 BMA Medical Book Competition More than five million people die from stroke each

year Stroke is also the leading cause of adult disability affecting over 20 million people worldwide with two thirds of stroke victims left permanently disabled We now know that speed of intervention is critical and patient outcomes are determined by a very narrow therapeutic window during which physicians need to be able to make their choice of treatment rapidly based on the best evidence available The purpose of this book is to review that evidence for both medical and surgical therapies as well as preventative strategies drawing on the expertise of leading international authorities to distinguish the issues for which there is a consensus on best practice from those for which the evidence remains inconclusive For example for patients with acute ischemic stroke the first choice is intravenous thrombolytic therapy but does a treatment window of 0 3 hours deliver outcomes significantly better than one of 3 4 5 hours Arterial hypertension is the single most important modifiable risk factor for ischemic stroke but what are the effects of blood pressure reduction among acute stroke patients How effective is blood pressure lowering in primary intracerebral hemorrhage What are the arguments in favour of continuation versus temporary discontinuation of antihypertensive therapy immediately after acute ischemic stroke Endovascular procedures carotid angioplasty stenting are increasingly important but what do the data tell us about their safety Or durability How do they compare with carotid endarterectomy The management of unruptured intracranial aneurysms is rife with controversies clip coil wait and watch The authors examine the evidence for and against Other sections examine the impact of various risk factors and special populations A section on stroke after cardiovascular surgeries reviews the incidence and management of stroke following a whole range of procedures Another examines special risks during pregnancy Lastly the book reviews our understanding of childhood stroke and presents current best practice recommendations for this most challenging group of patients
