Cerebrospinal Fluid In Clinical Neurology:

Cerebrospinal Fluid in Clinical Neurology Florian Deisenhammer, Finn Sellebjerg, Charlotte E Teunissen, Hayrettin Tumani, 2015-02-05 The cerebrospinal fluid CSF is an invaluable diagnostic tool in clinical neurology not only in the evaluation of inflammatory degenerative and malignant diseases of the nervous system but also in the diagnosis of all forms of cerebral and subarachnoidal bleedings The CSF can be easily obtained by lumbar puncture and a set of basic analyses can be conducted using relatively simple laboratory methods By combining different CSF parameters a wide range of diagnostic entities can be identified However properly interpreting the test results requires a high level of expertise and cannot be achieved by just reporting on individual analytic values This book covers essential aspects of cerebrospinal fluid analysis and its use in the diagnosis of common neurological diseases The first part addresses preclinical aspects such as the history of CSF as well as the anatomical physiological and biological background of this valuable fluid In addition CSF collection its preanalytical and methodological implications and the increasing number of disease specific markers in CSF are discussed in detail Lastly CSF analyses are put into context with clinical syndromes demonstrating their diagnostic value in neurological clinical practice *Cerebrospinal Fluid in Clinical Neurology* helps readers understand the preanalytical and analytical aspects of CSF diagnostics and offers a valuable reference guide for interpreting CSF results during the clinical work up for neurological patients

Cerebrospinal Fluid in Neurologic Disorders, 2017-11-17 *Cerebrospinal Fluid in Neurologic Disorders* Volume 146 provides a brief overview on the current use of CSF in clinical routine the physiology of CSF and its usefulness and potential as a biomarker The second part addresses the main purpose of the volume describing CSF from a research perspective in context with the most important diagnostic entities in neurology The book's authors provide insight into the current understanding of CSF changes in these various conditions and what it tells us about the nature of neurological diseases Furthermore methodological aspects are discussed as are shortcomings that need to be addressed Finally the book provides an outlook for potential directions that can be explored to improve the various aspects of CSF research with the ultimate goal of being incorporated in clinical practice Provides a brief overview on the current use of CSF in clinical routine the physiology of CSF and its usefulness and potential as a biomarker Addresses relevant research in context with the most important diagnostic entities in neurology Edited by leading authors in CSF research from around the globe presenting the broadest most expert coverage available

Cerebrospinal Fluid in Neurology and Psychiatry Joseph R. Bianchine, H. McConnell, 2013-11-11 Scientists have speculated as to the nature of cerebrospinal fluid CSF the third circulation or vital spirit for centuries Just what is this mysterious bathing solution of the central nervous system Is it a vehicle of transport for an animal spirit directing all our activities as thought by Galen Singer 1956 or but a modified tap water Halliburton 1917 With the advent of lumbar puncture cerebrospinal fluid has become a readily available and important means of studying disease affecting the nervous system In recent years many sophisticated tools including computer guided

gas chromatography mass spectrometry and high performance liquid chromatography have made it possible to identify and quantify many constituents of this fluid The CSF has an enormous though largely untapped potential in aiding diagnosis and evaluating treatment of many neurological psychiatric and systemic disorders As the ependyma is only a diffusional barrier between the CSF and extracellular fluid of the brain for many compounds changes in the concentration of these compounds in the CSF may reflect disease processes in the brain
