Shekelle, Stuart Whittaker, Samir Al-Adawi, 2018-05-11 In this book we invited 146 authors with expertise in health policy systems design management research or practice from each of the countries included to consider health reforms or systems improvements in their country or region The resulting case studies of 52 individual countries and five

regional groupings cover 152 countries or territories or three quarters of the world's nations. Each chapter author was asked to think 5-15 years into the future and make a prediction on how their health system could be strengthened as a result of the successful unfolding of their case study. The types of projects our authors have chosen to explicate into the future are wide ranging. They vary from e-consultation services in Estonia, achieving universal health coverage in Argentina and Mexico, reforming long-term care in the Netherlands, reassessing care for the aging population and the frail elderly in Australia, streamlining the health system through Lean Thinking in Nigeria, using regulation to improve care in South Africa, developing a new accreditation model in Turkey, through to a critique of physician specialization in Russia and applying IT initiatives to improve care in China, Lebanon, Taiwan, Papua New Guinea, the United Arab Emirates, Venezuela, and Wales. Chapter writers recognized that the improvement work they were doing was part of a moving target. There was general agreement that the effective use of limited resources and overcoming hurdles and constraints were crucial to enhancing health systems in order to deliver better care over the medium term. While some initiatives required considerable funding, many were relatively inexpensive. These case studies demonstrate ways in which fruitful application of partnerships and creativity can make considerable gains in strengthening healthcare delivery systems.

Features: The third book in a series on international health reform. Involves 146 contributing authors, five regional editors, a series editor, and a highly skilled support team to explore sustainable improvement in health systems in the future. Encompasses a time horizon of the next 5-15 years. Covers 152 countries or territories with 52 individual countries and an analysis of five regional groupings comprising 100 countries.

Integrating and Connecting Care A. Ryan, L.K. Schaper, S. Whetton, 2017-08-10. The last few decades have seen the digital transformation of healthcare with health informaticians taking the lead in innovations which have enabled the sector to evolve from rudimentary computer-based records to large-scale systems allowing for intra-organisational, national, and even international communication and information exchange. Establishing and maintaining strong partnerships between the healthcare community, government, universities, and industry is integral to supporting these advances. This book presents 24 selected papers from the 25th Australian National Health Informatics Conference (HIC 2017) held in Brisbane, Australia, in August 2017. The theme of HIC 2017 is Integrating and Connecting Care, and the conference provides the ideal professional and social environment for clinicians, researchers, health IT professionals, industry, and consumers to integrate, educate, and share their knowledge and debate current and future health systems. The papers in the book reflect the theme of the conference, highlighting the cutting-edge research, evidence, technology updates, and innovations crucial to the digital transformation of the healthcare sector. Health informatics and e-health play a central role in connecting information systems, being smart with data, and enhancing both practitioner and consumer experience in healthcare interactions, and the book will be of interest to researchers and practitioners alike.
