Critical Care Neurology And Neurosurgery Current Clinical Neurology:

Critical Care Neurology and Neurosurgery Jose I. Suarez, 2004-01-13 An authoritative and comprehensive review of the most important clinical issues facing critically ill neurologic and neurosurgical patients. The authors provide pertinent basic clinical diagnostic and management guidelines for all the conditions commonly encountered in the neurocritical care unit including the management of autonomic disorders that require critical care postoperative management and endovascular treatment. The authors also discuss the latest developments in the monitoring of different body systems emphasizing the management of cardiorespiratory complications and other medical conditions that may threaten the patient's life. Also detailed are the concepts of intracranial physiology and current neuromonitoring techniques subjects whose understanding is basic to effective management of critically ill neurologic patients. Numerous tables, figures, diagrams, and radiographs simplify and explicate both the diagnostic and therapeutic processes.

Seizures in Critical Care Panayiotis Varelas, 2008-08-17 A panel of international ICU and epilepsy physicians and researchers detail the epileptic phenomena that occur in the complex environment of the ICU. Focusing on the central nervous system, the authors systematically examine the most up-to-date evidenced-based data regarding ICU seizures including their most frequent causes, their pathophysiology, their clinical presentation, and the diagnostic evaluation needed to confirm their presence. They also discuss the challenges and specifics of the management of ICU seizures, reviewing the new antiepileptics and their interaction with other ICU medications, drugs with epileptogenic properties used in the ICU, and the role of the new enterally available antiepileptics in treating seizures. Numerous tables summarize drug interactions, neuroimages reveal common ICU seizure etiologies, and multiple electroencephalographic recordings demonstrate clinical or subclinical seizures in ICU patients.

Handbook of Neurocritical Care Anish Bhardwaj, Marek A. Mirski, 2010-10-14 Neurocritical care as a subspecialty has grown rapidly over the last two decades and has reached a level of distinct maturity with the advent of newer monitoring, diagnostic, and therapeutic modalities in a variety of brain and spinal cord injury paradigms. Handbook of Neurocritical Care, Second Edition, remains true to the operative tenet that time is brain, and rapid diagnosis and therapeutic interventions in these challenging patients cannot be overemphasized. The second edition of this important Handbook again serves as a quick practical reference for those involved in the care of critically ill neurological and neurosurgical patients. The care provided to this subset of critically ill patients continues to be multidisciplinary and includes care rendered from colleagues in emergency medicine, services, emergency medicine, neurology, neurosurgery, anesthesiology, critical care nursing, and physician assistance. Fully updated, all of the chapters again consist of easy-to-read bulleted points followed by a list of Key Points and important references, allowing for rapid access to vital information critical for fast and timely decision making. The first section covers a myriad of important general principles, while the second section addresses the major diagnostic categories of neurocritical care with several new topics. These include, for example, neuroleptic malignant syndrome and malignant hyperthermia.

meningitis and encephalitis and intraventricular hemorrhage Readers will find the algorithms tables and illustrations throughout the book not only useful but truly invaluable in facilitating fast and accurate decision making Accessible and comprehensive Handbook of Neurocritical Care Second Edition again fills a vital need by providing readers with a succinct and practical approach to the management of critically ill neurological and neurosurgical patients Seizures in Critical Care Panayiotis N. Critical Care Neurology Part I, 2017-01-25 Critical Care Neurology Part I Neurocritical Care focuses on the care specialists and general neurologists that consult in the ICU and their work with patients in acute life threatening situations who are dealing with neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness These two separate clinical situations form the pillars of neurocritical care hence these practices are addressed via two separate but closely related HCN volumes Chapters in both focus on pathophysiology and management and are tailored for both general neurologists and active neurocritical specialists with a specific focus on management over diagnostics Part I addresses the principles of neurocritical care and the management of various neurologic diseases Part II addresses the interplay between neurologic complications and the surgical medical cardiac and trauma of critical illnesses that most typically present in the ICU Provides an essential neurocritical care overview for general neurologists Presents neurocritical care specialists with an update on severe neurological illness management Offers coverage of all the most frequent neurologic diseases requiring intensive care Includes chapters authored by global leaders in the field providing the broadest most expert coverage available on the topics discussed

Thrombolytic Therapy for Acute Stroke Patrick D. Lyden, 2007-11-08 It often takes time for a new therapeutic modality to mature into an accepted treatment option After initial approval new drugs devices and procedures all go through this process until they become vetted by the scientific community as well as the medical community at large Thrombolysis for treatment of stroke is no exception Thrombolytic Therapy for Acute Stroke Second Edition comes four years after the first edition and provides a very comprehensive updated perspective on the use of intravenous rt TPA in acute stroke The authors provide longer term follow up on the pivotal clinical trials that led to Food and Drug Administration approval data concerning phase 4 trials in larger numbers of patients and most importantly the community experience that has accumulated since its release They add to this the latest promising information concerning intra arterial thrombolysis which is still under investigation and more speculative sections concerning possible new avenues of clinical research such as

combining intravenous thrombolysis with neuroprotective therapies or intra arterial thrombolysis A wealth of factual information is supplemented by chapters containing sage opinion from Drs Lyden and Caplan concerning the logistical economic and procedural issues that have been generated since the advent of this technology Importantly diagnosis does not take a back seat to therapeutics as illustrated by sections devoted to evaluation of the stroke patient very useful illustrative cases and clinical comments and chapters on the latest in imaging as applied to this field **Management of**
