Critical Comments On Transformationalgenerative Grammar 1962 197:

Linguistics and Pseudo-linguistics Robert Anderson Hall,1987-01-01 The doctrines of transformational generative grammar as promulgated in 1957 with frequent later emendations have on occasion been criticised sometimes severely Such criticism have however appeared mostly in article form and mostly in relatively inaccessible places Discussions in bookform have been rare In this book the criticism offered by Professor Hall over more than twenty years have been brought together They cover the range of linguistic structure phonology morphosyntax and semantics general theory and the history of linguistics In these essays the many short comings of transformational generative grammar are revealed by critical examination with inevitably negative conclusions The two final essays of the book deal with parallel aberrations in current literary theory especially Derridian radical skepticism concerning language and deconstruction as viewed from a linguistic stand point **Critical Comments on Transformational-generative Grammar 1962-1972** E. M. Uhlenbeck,1977

Bulletin de la Société Néophilologique Werner Soderhjelm,Hugo Suolahti,Axel Wallensköld,Arthur Långfors,1977 Includes music **The Language of Criticism** Jacqueline Margaret Henkel,1996 Jacqueline M Henkel explores the impact of linguistics and ordinary language philosophy on literary theory over the past four decades Her readings of key texts relocate the principal literary issues raised by the interaction between these fields She shows how various linguistic models among them Saussurean and Prague School linguistics generative grammar and speech act theory have affected such major movements in literary criticism as stylistics Jakobsonian structuralism narratology reader oriented criticism and deconstruction and its offshoots Among the major figures she discusses in addition to Saussure and Jakobson are Chomsky Derrida Austin and Searle Linguistics and Literary Style Donald C. structure He treats linguistic features as primitives and argues that a 2 x n matrix allows for multiple discrete dimensions to represent symmetries in linguistic features and to derive the fabric of syntax and perhaps of phonology as well Three primary research questions guide the core of these papers A Methodologically how can broadly defined mathematical cognitive principles guide linguistic investigation B To what extent do general mathematical principles apply across linguistic domains What principles guide computation at different levels of linguistic structure phonology metrical structure syntax C How is the computational domain defined In these manuscripts Vergnaud's goal is not to radically depart from the Minimalist Program within generative grammar but rather to take the underlying goal of the generative program and bring it to an even more general scientific level The themes of symmetry and periodicity in this book reflect his goal of scientific progress in linguistics and he has opened the doors to new exploration of old empirical problems in linguistics that may someday have deeper biological and physical explanations through the theory presented in this publication

Empirical Linguistics Geoffrey Sampson,2002-09-12 Linguistics has become an empirical science again after several decades when it was preoccupied with speakers hazy intuitions about language structure With a mixture of English language case studies and more theoretical analyses Geoffrey Sampson gives an overview of some of the new findings and insights about the nature of language which are emerging from investigations of real life speech and writing often although not always using computers and electronic language samples corpora Concrete evidence is brought to bear to resolve long standing questions such as Is there one English language or many Englishes and Do different social groups use characteristically elaborated or restricted language codes Sampson shows readers how to use some of the new techniques for themselves giving a step by step recipe book method for applying a quantitative technique that was invented by Alan Turing in the World War II code breaking work at Bletchley Park and has been rediscovered and widely applied in linguistics fifty years later **contemporary essays on style** glen a. love,1969 Syntactic Relations Peter Hugoe

Anthropology in Theological Perspective Wolfhart Pannenberg,2004-08-23 In this comprehensive study a renowned

theologian examines the anthropological disciplines human biology psychology cultural anthropology sociology and history for their religious implications The result is a theological anthropology that does not derive from dogma or prejudice but critically evaluates the findings of the disciplines Pannenberg begins with a consideration of human beings as part of nature moves on to focus on the human person and then considers the social world its culture history and institutions All the elements of this multi faceted study unite in the final chapter on the relation of human beings to their history Universal Grammar in Second-Language Acquisition Margaret Thomas,2004-07-31 This book discusses how scholars in the west have conceived that human languages share important properties and how westerners have understood the nature of second or foreign language learning Context and Development Robert Cohen,Alexander W. Siegel,2014-02-04 The purpose of this book is to explore meaningful integrations of developmental processes and functioning with conceptualizations of context a term traditionally denoting physical settings social arenas or perceptual or social backdrops in relation to a focal point However the study of context has taken a considerably more unique and vibrant form in recent years the term is becoming more than a substitute for background independent variables Rather the contributions of context to behavior thought feelings and vice versa are becoming central issues in many research domains This text is a collection of empirical and theoretical accounts for understanding context its focus is on integrating the study of context with the science of developmental psychology Although the authors work in many different areas of the field and with different populations they all converge on a central methodological conceptual theme of contextualism which is presented as the dynamic integration of intraindividual factors with environmental and social environmental factors
