
Enhancing Students' Critical Thinking through Translation Practice: A Narrative Review

Abstract. This paper delves into one of the primary challenges in higher education, which revolves around the methods employed by educators to cultivate enhanced critical thinking skills in students. While certain majors such as philosophy, logic, and literary criticism inherently demand higher levels of critical thinking, there exists a pressing need to investigate the efficacy of practical exercises like translation in fostering critical thinking abilities among university students (Ghazala, 2008; Beylard-Ozeroff, Levý, & Popović, 1998). In this context, this narrative review embarks on an exploration of the intricate relationship between critical thinking and translation. While previous research has predominantly concentrated on the influence of critical thinking on translation quality, this study takes a novel perspective by assessing whether engagement in translation activities can indeed augment the critical thinking capabilities of students. Through an extensive literature review, this study examines existing research that elucidates the correlation between critical thinking and translation skills. Furthermore, it scrutinizes the fundamental constituents of critical thinking and the cognitive processes intricately involved in translation. The findings from this investigation unveil a positive connection between the practice of translation and the enhancement of critical thinking skills among students. Consequently, this narrative review not only contributes valuable insights but also underscores the potential educational advantages of incorporating translation exercises into curricula as a means to foster critical thinking.

Introduction

In the academic world, the relationship between critical thinking and translation is the subject of important research. Although many studies have examined how critical thinking affects the quality of translation, this narrative review focuses on a less studied dimension: the influence of translation practice on the development of critical thinking skills among students. Critical thinking, defined as the ability to interpret, analyze, evaluate, reason, explain, and regulate cognitive functions (Facione, 1990), plays an important role in various educational contexts. The main objective of this narrative review is to examine whether participation in translation activities can improve students' critical thinking skills. To this end, we carried out a comprehensive literature study focusing on studies assessing the relationship between critical thinking and translation skills. This review also compares the basic components of critical thinking and the cognitive processes involved in translation. By reviewing existing research, we aim to provide a perspective on the potential benefits of incorporating translation tasks into educational programs to promote critical thinking among students.
