social sciences Writings on the lives and theories of individual social scientists abound but there has been no fully documented collection of memorable quotations from the social sciences as a whole The frequent use of quotations in scientific as well as literary writings that are mere summaries or paraphrases typically fail to capture the full force of formulations that have made quotations memorable This book of quotations invites the further reading or rereading of the original texts beyond the quotations themselves Sills and Merton draw extensively upon the writings that constitute the historical core of the social sciences and social thought those works with staying power often described as the classical texts Many quotations have been drawn from these classical texts because the quotations contain memorable ideas memorably expressed Both consequential and memorable these words have been quoted over the generations entering into the collective memory of social scientists everywhere and at times diffusing into popular thought and into the vernacular as well This book is useful to social scientists anthropologists economists historians political scientists psychiatrists psychologists sociologists and statisticians and for all who want to learn or verify memorable formulations and phrases concerning social thought and social theories It is particularly useful for graduate students taking courses that examine the history of their discipline

Scale-free Dynamics and Critical Phenomena in Cortical Activity Biyu J. He, Andreas Daffertshofer, Tjeerd W. Boonstra, The brain is composed of many interconnected neurons that form a complex system from which thought behavior and creativity emerge through self organization By studying the dynamics of this network some basic motifs can be identified Recent technological and computational advances have led to rapidly accumulating empirical evidence that spontaneous cortical activity exhibits scale free and critical behavior Multiple experiments have identified neural processes without a preferred timescale in the avalanche like spatial propagation of activity in cortical slices and in self similar time series of local field potentials Even at the largest scale scale free behavior can be observed by looking at the power distributions of brain rhythms as observed by neuroimaging These findings may indicate that brain dynamics are always close to critical states a fact with important consequences for how brain accomplishes information transfer and processing Capitalizing on analogies between the collective behavior of interacting particles in complex physical systems and interacting neurons in the cortex concepts from non equilibrium thermodynamics can help to understand how dynamics are organized In particular the concepts of phase transitions and self organized criticality can be used to shed new light on how to interpret collective neuronal dynamics Despite converging support for scale free and critical dynamics in cortical activity the implications for accompanying cognitive functions are still largely unclear This Research Topic aims to facilitate the discussion between scientists from different backgrounds ranging from theoretical physics to computational neuroscience brain imaging and neurophysiology By stimulating interactions with the readers of *Frontiers in Physiology* we hope to advance our understanding of the role of scale freeness and criticality in organizing brain dynamics What do these new perspectives tell

us about the brain and to what extent are they relevant for our cognitive functioning For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the principles that organize the dynamics of cortical activity While focusing on work in the neurosciences this Research Topic also welcomes theoretical contributions from physics or computational approaches Norwich University Record ,1909 A magazine intended for the alumni and friends of Norwich University **Outcastia Campaign Setting Book II: Player's Guidebook** Nitehawk Interactive Games,2012-07-18 You ve journeyed through the land in Book I and learned what you need to about the realm now dive head first into the meat of this Campaign Setting with newly designed gaming elements that will help you to make your mark in the Land of Dragons This book includes Races both unique and familiar Eight races to choose from with subraces for most for a total of 28 choices to add to your arsenal of races we ve already given you in the AHB classes to delight both the power player and the new gamer alike with 9 to choose from and even a new NPC class for your CM three new magic domains for the spellcaster inside of you with loads of new spells as well as new skills feats and equipment With this book you will have everything you need to play in the realm of Outcastia and beyond Even CMs will have most everything they will need for now So what are you waiting for Grab some paper and pencils Bring out that dice Rev up your imagination and travel to a land of magic and mayhem Your journey awaits **The Character Codex III: The Book of Eastern Fantasy Character Classes** Robert Neri,2016-03-21 A new supplement from Ranger Games for the Dice Glory game system containing specialist character classes drawn from Asian and middle eastern history and lore This book is a great resource for both Players and Game Masters wishing to introduce some eastern flavor into their game *Dark Revelations - The Role Playing Game - Book of Magic* C.N.
