Bicycle Utopias Cosmin Popan,2019-01-15 Bicycle Utopias investigates the future of urban mobilities and post car societies arguing that the bicycle can become the nexus around which most human movement will revolve Drawing on literature on post car futures Urry 2007 Dennis and Urry 2009 transition theory Geels et al 2012 and utopian studies Levitas 2010 2013 this book imagines a slow bicycle system as a necessary means to achieving more sustainable mobility futures The imagination of a slow bicycle system is done in three ways Scenario building to anticipate how cycling mobilities will look in the year 2050 A critique of the system of automobility and of fast cycling futures An investigation of the cycling senses and sociabilities to describe the type of societies that such a slow bicycle system will enable Bicycle Utopias will appeal to students and scholars in fields such as sociology mobilities studies human geography and urban and transport studies This work may also be of interest to advocates activists and professionals in the domains of cycling and sustainable mobilities

Unsettled Issues Regarding First- and Last-mile Transport Jody Emlyn Muelaner,2021-10-15 Sustainable first last only mile FLO mile transport is the key to sustainable travel It could directly replace private car use for short urban journeys which account for 1% of global greenhouse gas emissions More importantly it could enable public transport to be used for longer journeys which account for 6% of emissions Active travel such as walking and cycling has the lowest emissions and provides huge economic benefits that pay for the required infrastructure many times over Unsettled Issues Regarding First and Last Mile Transport discusses the mass switch to more sustainable modes of transport and how to increase their perceived value to users It also covers the prioritization of publicly owned cycles over rideshare options due to the latter s higher lifecycle emissions including manufacture redistribution and service operations and station construction Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2021024>

The Politics of Cycling Infrastructure Cox, Peter,Koglin, Till,2021-07-14 This volume casts a critical gaze on current practices and on the wider relationship of bicycling to other forms of urban mobility especially within the context of sustainable and livable cities The book s international contributors provide an interdisciplinary critical analysis of policy and practice

Global Planning Innovations for Urban Sustainability Sébastien Darchen,Glen Searle,2018-11-01 As the world becomes more urbanised solutions are required to solve current challenges for three arenas of sustainability social sustainability environmental sustainability and urban economic sustainability This edited volume

interrogates innovative solutions for sustainability in cities around the world The book draws on a group of 12 international case studies including Vancouver and Calgary in Canada San Francisco and Los Angeles in the US North America Yogyakarta in Indonesia Seoul in Korea South East Asia Medellin in Colombia South America Helsinki in Finland Freiburg in Germany and Seville in Spain Europe Each case study provides key facts about the city presents the particular urban sustainability challenge and the planning innovation process and examines what trade offs were made between social environmental and economic sustainability Importantly the book analyses to what extent these planning innovations can be translated from one context to another This book will be essential reading to students academics and practitioners of urban planning urban sustainability urban geography architecture urban design environmental sciences urban studies and politics Cycling Futures Jennifer Bonham, Marilyn Johnson, 2015-12-04 The focus of the first half of the book is largely on the current engagement with cycling challenges faced by existing and would be cyclists and the issues cycling might address The second half of the book is concerned with strategies and processes of change Contributors working from different ontological positions reflect on changing socio spatial relations to enable the broadest possible participation in cycling **Unsettled Technology Domains for Pathways to Automotive Decarbonization** Jody Emlyn Muelaner, 2020-07-22 Replacing fossil fueled vehicles with battery electric ones is a risky strategy It is likely to be limited by the supply of metals critical to battery and solar cell production and the investment required in decarbonized electricity Using hydrogen to store renewable energy would greatly reduce efficiency further increasing the investment required to decarbonize the electricity supply The lowest technical risk and most economical pathway to decarbonization is reducing private car use Shorter journeys would be made by walking and cycling also known as active travel with public transport used for most longer journeys Realizing this cultural change in transport behavior will first require comprehensive networks for safe and enjoyable active travel which separate walking and cycling All locations should connect to either a fully segregated cycleway or traffic calmed roadways with a maximum speed of 30 kph Active travel investment can save money due to improved public health eliminate the 11% of carbon emissions caused by short car journeys and facilitate public transport by empowering people to reach their final destination Bicycle manufacturing is growing rapidly and further innovations in transport cycles and other lightweight vehicles compatible with an active travel infrastructure will boost this growth Increased use of public transportation is vital to efficiently use the limited availability of decarbonized electricity Autonomous vehicles in private use may increase vehicle miles but autonomous operation within public transportation systems could be transformative The remaining private cars buses and heavy goods vehicles could be electrified more cost effectively using electric road systems These enable unlimited range and smaller batteries with the lowest societal cost of any private car based decarbonization pathway Although users may pay higher road tax or tolls for the infrastructure this is easily offset by greatly reduced vehicle costs and improved efficiency Electrification needs to be brought initially to city bus networks and heavily used transport corridors Wider use

will require standardization and investment at the federal level or continental level NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the issues they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271>

EPR2020014 Urban Mobility and Social Equity in Latin America Daniel Oviedo, Natalia Villamizar Duarte, Ana Marcela Ardila Pinto, 2020-11-16 This volume of Transport and Sustainability focuses on how spatial and social mobilities are intertwined in the reproduction of spatial and social inequities in Latin American cities **Cycling** Peter Cox, 2019-03-15 Cycling A Sociology of V lomobility explores cycling as a sociological phenomenon Drawing on extensive ethnographic fieldwork it considers the interaction of materials competencies and meanings that comprise a variety of cycling practices What might appear at first to be self evident actions are shown to be constructed through the interplay of numerous social and political forces Using a theoretical framework from mobilities studies its central themes respond to the question of what it is about cycling that provokes so much interest and passion both positive and negative Individual chapters consider how cycling has appeared as theme and illustration in social theory as well as the legacies of these theorizations The book expands on the image of cycling practices as the product of an assemblage of technology rider and environment Riding spaces as material technologies are found to be as important as the machinery of the cycle and a distinction is made between routes and rides to help interpret aspects of journey making Ideas of both affordance and script are used to explore how elements interact in performance to create sensory and experiential scapes Consideration is also given to the changing identities of cycling practices in historical and geographical perspective The book adds to existing research by extending the theorization of cycling mobilities It engages with both current and past debates on the place of cycling in mobility systems and the problems of researching analyzing and communicating ephemeral mobile experiences **Planning After**

Petroleum Jago Dodson, Neil Sipe, Anita Nelson, 2016-10-04 The past decade has been one of the most volatile periods in global petroleum markets in living memory and future oil supply security and price levels remain highly uncertain This poses many questions for the professional activities of planners and urbanists because contemporary cities are highly dependent on petroleum as a transport fuel How will oil dependent cities respond and adapt to the changing pattern of petroleum supplies What key strategies should planners and policy makers implement in petroleum vulnerable cities to address the challenges of moving beyond oil How might a shift away from petroleum provide opportunities to improve or remake cities for the economic social and environmental imperatives of twenty first century sustainability Such questions are the focus of contributors to this book with perspectives ranging across the planning challenge overarching petroleum futures governance transition and climate change questions the role of various urban transport nodes and household responses ways of

measuring oil vulnerability and the effects on telecommunications ports and other urban infrastructure This comprehensive volume with contributions from and focusing on cities in Australia the UK the US France Germany the Netherlands and South Korea provides key insights to enable cities to plan for the age beyond petroleum **The Vision Zero Handbook** Karin Edvardsson Björnberg, Sven Ove Hansson, Matts-Åke Belin, Claes Tingvall, 2022-11-30 This open access handbook provides a comprehensive treatment of Vision Zero an innovative policy on public road safety developed in Sweden Covering all the major topics of the subject the book starts out with a thorough examination of the philosophy ideas and principles behind Vision Zero It looks at conditions for the effectiveness of the policy principles of safety and responsibility as well as critique on the policy Next the handbook focuses on how the Vision Zero ideas have been received and implemented in various legislations and countries worldwide It takes into account the way Vision Zero is looked at in the context of international organizations such as the WHO the UN and the OECD This allows for a comparison of systems models and effects The third part of the handbook discusses the management and leadership aspects including ISO standards equity issues other goals for traffic and transportation and opportunities for the car industry Part four delves into tools technologies and organizational measures that contribute to the implementation of Vision Zero in road traffic Examples of specific elements discussed are urban and rural road designs human factor designs and avoiding drunk and distracted driving The final part of the handbook offers perspectives on the transfer of Vision Zero policy to other areas ranging from air traffic to suicide prevention and nuclear energy Vision Zero is a public road safety policy including both a long term goal that no one shall be killed or seriously injured as a consequence of accidents in road traffic and a safety principle stating that the design and function of the road transport system shall be adapted to meet the requirements that follow from that goal It is a new road safety paradigm which has resulted in new types of responsibilities among stakeholders technological innovations and new strategies and organizational measures to achieve a safe system The road safety work based on Vision Zero has shown promising results and although Sweden has not yet reached a safe system the number of fatalities and severe injuries has decreased substantially This is an open access book
