**Unseen** Craig L. Katz, 2024-11-28 Stigma still surrounds suffering from mental health problems and in most low resource settings in developed and especially the developing world this prejudice is compounded by an utter lack of resources to address these problems The class of mental health problems is the greatest source of morbidity worldwide compared to all other categories of health problems and is also the most neglected The difference between the vast mental health needs worldwide and the scarce resources that address them is known as the mental health gap This book portrays this gap through the story of two men suffering from schizophrenia and clinical depression in an unnamed low income country At the same time it portrays how there can be anywhere by providing glimpses of the mental health issues of a relief worker's mother back home This book relies on the stories of Sam and Berko to bring alive the mental health gap and raise awareness of the all too often unseen presence of mental illness throughout the world a problem that contributes to enormous suffering and disability without ever showing up on an X ray or in blood tests let alone in public discourse The book aspires to educate on the mental health gap by showing rather than telling and using narrative rather than epidemiology and statistics It will inspire mental health professionals to apply their craft outside of customary areas of mental health practice policy makers and government planners to better allocate protections and resources to mental health problems the public to advocate for change and everyone to reflect on the sources of our distress and our contentment

than 20 000 people dead and hundreds of thousands of residents displaced Working amid unimaginable destruction and suffering volunteer psychiatrists and psychologists would quickly improvise a makeshift response offering thousands of survivors access to psychiatric care for the first time Never before had there been such a collective expression of concern for people s psychological well being Christopher Dole explores how this psychiatric response fashioned individual and collective lives far into the disaster s future Based on research spanning two decades from the earthquake to its twentieth anniversary he considers how this convergence of geological activity and psychiatric expertise introduced novel psychiatric and psychological discourses into everyday lives of survivors as it also animated new visions of self society and technopolitical promise Living On not only offers insight into Turkey s transformations over the opening decades of the twenty first century but it also sheds light on a more general arrangement of disaster governance and medical expertise one that increasingly characterizes our era of planetary ecological crisis
