Shelley Staples, *The Discourse of Nurse–Patient Interactions: Contrasting the Communicative Styles of U.S. and International Nurses*, Amsterdam; Philadelphia, PA: John Benjamins, 2015; xiv + 263 pp., €99.00/US\$149.00 (e-book).

Reviewed by: Wen Ma, School of Foreign Languages and Literature, Shandong University, P.R. China

As an important form of patient–provider interaction, nurse–patient interaction is of great interest to sociologists, psychologists, anthropologists and communication scholars who study medicine. This book stands out as a pioneering and insightful study in this field. Staples integrates both quantitative and qualitative approaches to situational, linguistic and interactive descriptions of nurse–patient interactions, which are interwoven with contrastive analysis of the communicative styles of Internationally Educated Nurse (IEN) and US Educated Nurse (USN) interactions based on a corpus of nurse–patient assessment interviews.

The comprehensive linguistic description and discourse analysis arise from the practical aim to improve the communication skills of IENs and USNs, with a hypothesis that ‘the use of interactional, lexico-grammatical, fluency, prosodic, and non-verbal features will vary across discourse level phases within nurse–patient interactions’ (p. 9).

Chapter 1 makes a brief introduction of international nurses in the US workforce, reviews the discourse analysis of provider–patient interactions and that of communicative style and register to justify the research, and indicates the main focuses of the analysis.

Chapters 2 and 3 set up the theoretical and analytic foundation for the study. In Chapter 2, Staples introduces the research background, in which six phases of provider–patient interaction are identified, seven types of linguistic and nonlinguistic features are reviewed and two measures to evaluate the effectiveness of provider–patient interactions are discussed. Chapter 3 explains the data collection, corpus description and coding procedures. The corpus contains interactions between standardized patients (SPs), who are actors trained to demonstrate the same medical case to each nurse, and registered nurses working at three US hospitals: 52 interactions between SPs and IENs and 50 interactions between SPs and USNs.

Chapters 4–10 present the quantitative analysis and qualitative interpretation of the data. In Chapter 4, Staples scrutinizes situational characteristics of nurse–patient interactions from a register perspective, such as the differences in the language and the native countries of the speakers, and the asymmetry in social roles of the nurses and patients
