

DIRECT AND INVERSE VARIATION

DIRECT VARIATION

Direct Variation: $x = y/k$	Direct Variation: $y = kx$	Constant of Proportionality $k = y/x$ ratio
--------------------------------	-------------------------------	--

If three men earn \$180 in one day, how much will 15 men earn at the same rate of pay?

First write an equation	$180 = k(3)$
Find the constant of variation	$180/3 = k$ $k = 60$
Use the constant of variation along with the given information	$y = 60(15)$ $y = 900$

How much would zero men earn? Zero Dollars
If it makes sense = Direct Variation

INVERSE VARIATION

Inverse Variation: $x = \frac{k}{y}$	Inverse Variation: $y = \frac{k}{x}$	Constant of Proportionality $k = xy$ product
---	---	---

If 8 snow plows can plow the airport in 6 hours, how many hours will it take 3 snow plows to plow the same airport?

First write an equation	$(6)(8) = k$
Find the constant of variation	$k = 48$
Use the constant of variation along with the given information	$y(3) = 48$ $y = 48/3$ $y = 16$

How long would it take to clear the runways if zero plows were used?
The timer would just keep going... because no-ones plowing it... so an answer doesn't exist...
If it doesn't make sense = Inverse Variation

FYI: There are other types of Variation out there but in all of them one thing remains the same:

K is "konstant" = it won't change.

K = "CONSTANT OF VARIATION"
OR "CONSTANT OF PROPORTIONALITY"

Direct Variation

y varies directly as x.
As x increases, y also increases.
As x decreases, y also decreases.
Equation: $y = kx$

Inverse Variation

y varies inversely as x.
As x increases, y decreases.
As x decreases, y increases.
Equation: $xy = k$ or $y = \frac{k}{x}$

Joint Variation

y varies directly to two or more quantities.
Equation: $y = kxz$

Combined Variation

y varies directly to some quantities and varies inversely to some other quantities.
Equation: $xyz = k$ or $y = \frac{kz}{x}$
