North American Exploration John Logan Allen,1997-01-01 The third volume of North American Exploration covering 1784 to 1914 charts a dramatic shift in the purpose priorities and results of the exploration of North America As the nineteenth century opened exploration was still fostered by the growth of empire but by the 1830s commercial interests came to drive most exploratory ventures particularly through the fur trade By midcentury however as imperial rivalries lessened and the fur trade declined exploration was driven by the growing scientific spirit of the age although the science was often conducted in the service of a search for railroad routes or natural resources linked to military concerns A clear transition took place as the spirit of the Enlightenment gave way to economic imperatives and to the science of the post Darwinian age and exploration passed beyond discovery and geographical definition This volume explores the resultant beginnings of an understanding of the continent and its native peoples

Applied Hydrodynamics in Petroleum Exploration E. C. Dahlberg, 2013-11-11 It has for some time been the author's opinion that the need exists for a complete self contained volume on hydrodynamics addressed to and written in an idiom for geologists and geophysicists actively engaged in the search for hydrocarbons This book is offered as my attempt to satisfy this need Explorationists traditionally concern themselves with four basic aspects of oil and gas occurrence since these constitute the necessary conditions enhancing the likelihood of subsurface hydrocarbon accumulations They are Trap Reservoir Source and the Fluids themselves Historically great attention has been paid to traps and reservoirs and much pertinent literature on structure stratigraphy and lithology is available With respect to sources an increasing body of literature is becoming available in the form of articles books and research reports in the areas of geochemistry and mineralogy It is to the largely ignored fourth aspect the fluids that this book is directed In its formulation I have drawn from numerous sources college physics texts hydrodynamics is one of the most difficult subjects in physics personal notes from a rigorous two week course presented by M K Hubbert who literally fathered the discipline journal articles some strong and others weak in their treatment of the subject discussions with experienced exploration geologists some of whom have successfully utilized these procedures and others who were not so sure and experience gained as well as mistakes made in the course of my own personal oil and gas exploration activities
