A Solution to the Problem of Externalities and Public Goods when Agents are Well-informed Hal R. Varian, 1990 I consider economic environments involving externalities and public goods where agents have full information but the regulator does not For these environments I present a class of simple two stage games whose subgame perfect equilibria are efficient allocations In the case of two party externalities the equilibria involve compensation for the party upon whom the externality is inflicted In the case of public goods the equilibria are Lindahl allocations

Public Goods and Market Failures Tyler Cowen, 2001 Assertions of market failure are usually based on Paul Samuelson's theory of public goods and externalities This book both develops that theory and challenges the conclusion of many economists and policy makers that market failures cannot be corrected by market forces The volume includes major case studies of private provision of public goods Among the goods considered are lighthouse services education municipal services and environmental conservation

Externalities and Public Expenditure Theory James M. Buchanan, 2001 In his foreword Geoffrey Brennan states The papers in this volume represent a coherent set of pieces focused on aspects of public expenditure theory and constitute all of Buchanan's papers in this area Buchanan's work on the subject of what governments should do and his insistence on Knut Wicksell's ideal that taxation and public expenditure be integrated topics have contributed significantly to the current thinking of most economists on the topic Geoffrey Brennan summarizes Buchanan's central themes in this way There are two messages that emerge from this work one is that a proper sense of the extent of market failure rather than its mere presence is relevant in all cases the other is that correcting for such market failure is often a complex multidimensional business not captured by direct public provision at zero price and not necessarily involving expansion of market output The twenty nine papers represented in this volume are grouped into these major subject categories 1 Public Services and Collective Action 2 Externalities 3 Clubs and Joint Supply 4 Public Goods Theory 5 Applications City Health and Social Security 6 Distributive Norms and Collective Action This volume also includes what are arguably Buchanan's two most famous articles Externality which he wrote with William Stubblebine and Economic Theory of Clubs James M Buchanan is an eminent economist who won the Alfred Nobel Memorial Prize in Economic Sciences in 1986 and is considered one of the greatest scholars of liberty in the twentieth century

as do export industries when other countries retaliate with tariffs of their own Import competing industries and the government gain from tariffs The present approach integrates theories of market behavior and general equilibrium on the microeconomic side Exchange rate theory bridges from trade theory into balance of payments theory In the final chapter on open economy macroeconomics the limits of monetary and fiscal policies due to the competitive foreign exchange market is the focus Theoretical diagrams present the theory without assuming intermediate theory Numerous problems for each section build confidence in applying the theory Boxed examples illustrate the importance of theory Each chapter includes a concise mathematical appendix that should appeal to students with interest and to instructors preparing for class
