Extinction Matthew Mather, 2015 **Extinction** E. Gordon Dickie, 2005-11-01 **And Then There was One** Margery Facklam, 1990 Examines the many reasons for the extinction and near extinction of animal species Discusses how some near extinctions have been reversed through special breeding programs and legislation to save endangered species *The Sixth Extinction* Instaread, 2015-09-15 PLEASE NOTE This is key takeaways and analysis of the book and NOT the original book The Sixth Extinction by Elizabeth Kolbert Key Takeaways Analysis Review Preview The Sixth Extinction is a book by award winning journalist Elizabeth Kolbert In this book the author demonstrates that species are dying out at a rate comparable to the previous mass extinctions and if the trend of global warming deforestation and pollution continues in its present course the numbers of extinct species will meet or exceed that rate of destruction This event will include the extinction of humanity What this means is that the current loss of life today will soon justify the term The Sixth Extinction a mass extinction like the one that destroyed the dinosaurs 65 million years ago When humans originated about 100 000 years ago they began to hunt some species into extinction Their ability to outcompete other early hominids for food led to the extinction of those species including Neanderthals The extinction of species picked up steam when humans began transforming great swaths of forest and plains into farmland about 10 000 years ago Inside this Instaread of The Sixth Extinction Overview of the book Important People Key Takeaways Analysis of Key Takeaways About the Author With Instaread you can get the key takeaways and analysis of a book in 15 minutes We read every chapter identify the key takeaways and analyze them for your convenience

The Sixth Extinction Terry Glavin, 2007-04-03 A survey of the social extinctions taking place in the modern world draws on a variety of scientific disciplines to reveal how advances in globalization are contributing to the losses of languages as well as diverse cultural ways of living seeing and understanding **Nemesis** Donald Goldsmith, 1986 Proposes a controversial new theory explaining the extinction of the dinosaurs that involves the possible existence of a death star that causes comet showers every twenty six million years Extinction Studies Deborah Bird Rose, Thom Van Dooren, Matthew Chrulew, 2017 Extinction Studies focuses on the entangled ecological and social dimensions of extinction exploring the ways in which extinction catastrophically interrupts life giving processes of time death and generations The volume opens up important philosophical questions about our place in and obligations to a more than human world Drawing on fieldwork philosophy literature history and a range of other perspectives each of the chapters in this book tells a unique extinction story that explores what extinction is what it means why it matters and to whom **Extinctions in Near Time** Ross D. E. MacPhee, Hans-Dieter Sues, 2014-09-01 Extinctions in Near Time Ross D.E. MacPhee, Hans-Dieter Sues, 2013-11-09 Near time an interval that spans the last 100 000 years or so of earth history qualifies as a remarkable period for many reasons From an anthropocentric point of view the out standing feature of near time is the fact that the evolution cultural diversification and global spread of Homo sapiens have all occurred within it From a wider biological perspective however

the hallmark of near time is better conceived of as being one of enduring repeated loss. The point is important. Despite the sense of uniqueness implicit in phrases like the biodiversity crisis meant to convey the notion that the present bout of extinctions is by far the worst endured in recent times, substantial losses have occurred throughout near time. In the majority of cases, these losses occurred when and only when people began to expand across areas that had never before experienced their presence. Although the explanation for these correlations in time and space may seem obvious, it is one thing to rhetorically observe that there is a connection between humans and recent extinctions and quite another to demonstrate it scientifically. How should this be done? Traditionally, the study of past extinctions has fallen largely to researchers steeped in such disciplines as paleontology, systematics, and paleoecology. The evaluation of future losses, by contrast, has lain almost exclusively within the domain of conservation biologists. Now more than ever, there is opportunity for overlap and sharing of information.

And Then There Was Margery Facklam, 1990. Examines the many reasons for the extinction and near extinction of animal species. Discusses how some near extinctions have been reversed through special breeding programs and legislation to save endangered species.

Fiction and the Sixth Mass Extinction Jonathan Elmore, 2020. Fiction and the Sixth Mass Extinction is one of the first works to focus specifically on fiction's engagements with human-driven extinction. Drawing together a diverse group of scholars and approaches, this volume pairs established voices in the field with emerging scholars and traditionally recognized climate fiction cli-fi with texts and media typically not associated with Anthropocene fictions. The result is a volume that both engages with and furthers existing work on Anthropocene fiction as well as laying groundwork for the budding subfield of extinction fiction. This volume takes up the collective insistence on the centrality of story to extinction studies. In various and disparate ways, each chapter engages with the stories we tell about extinction: about the extinction of animal and plant life and about the extinction of human life itself. Answering the call to action of extinction studies, these chapters explore what kinds of humanity caused this event and what kinds may live through it; what cultural assumptions and values led to this event and which ones could lead out of it; what relationships between human life and this planet allowed the sixth mass extinction and what alternative relationships could be possible.
