Master Illusionist Federico Sanchez, 2010-11-05 Federico Sanchez's interest in the brain began primarily related to artificial intelligence and computers while studying mechanical engineering at Tufts University in the early 70s. For the next three decades he studied the human brain sporadically as an ongoing hobby. But after the death of his younger son by suicide in 2002 using the latest research on the brain he committed to explain not only how suicide is possible but how most other mental disorders come about. He synthesized his findings in *The Master Illusionist: Principles of Neuropsychology* a groundbreaking study on the inner workings of the human brain from an engineering perspective. This is a new paradigm setting study which brings understanding to how our behavior, perception, cognition, feelings, and thoughts are generated and are interrelated. The book focuses on the neurological connections between various structures of the brain and proposes the cortex the most noticeable evolutionary feature that distinguishes us from other mammals is many expanded memory systems. The challenge becomes how to explain everything the human brain does based on these memory systems. The interactions between these memory systems with each other and with the thalamus and basal ganglia is explained and a new perspective of who we are opens up new revolutionary possibilities for psychotherapy and pharmacology for mental disorders or other mental deficits. The book devotes chapters to subjects such as the motor and visual systems, smell memory, synesthesia, the generation and regulation of emotions, autism, attention deficit hyperactivity disorder, mental disorders, suicide, and personality disorders.

the idea that evolution of the brain in humans is the result of social interaction This book also traces the products of the social brain ideology religion urban life housing and learning and adapting to dense complex social interactions It uniquely compares brain evolution in social animals across the animal kingdom and examines the nature of the human brain and its evolution within the social and historical context of complex human social structures *How the Gifted Brain Learns* David A. ultimately suffice to explain all psychologically described phenomena This assumption stems from the idea that the brain consists entirely of material particles and fields and that all causal mechanisms relevant to neuroscience can be formulated solely in terms of properties of these elements Contemporary basic physical theory differs from classic physics on the important matter of how consciousness of human agents enters into the structure of empirical phenomena The new principles contradict the older idea that local mechanical processes alone account for the structure of all empirical data Contemporary physical theory brings directly into the overall causal structure certain psychologically described choices made by human agents about how they will act This key development in basic physical theory is applicable to neuroscience This book explores this new framework
