IYA 2009 Final Report , **Europe to the Stars** Govert Schilling,Lars Lindberg Christensen,2013-02-01 The creation of the European Southern Observatory ESO in 1962 was the culmination of the dream of leading astronomers from five European countries Over the years as more member states joined ESO constructed the La Silla and Paranal observatories as well as the Atacama Large Millimeter submillimeter Array ALMA together with partners ESO is now starting to build the world s biggest eye on the sky the European Extremely Large Telescope At the dawn of 2012 its 50th anniversary year ESO is ready to enter a new era One that not even its founding members could have anticipated in their boldest dreams Constantly at the technological forefront ESO is ready to tackle new and as yet unimaginable territories of high precision technology and scientific discovery Produced especially for ESO s 50th anniversary this sumptuously illustrated book takes the reader behind the scenes of the most productive ground based observatory in the world It contains the best 300 of ESO s images hand picked from a large collection of more than 100 000 images Beautifully produced Europe to the Stars tells the story of how dreams of giant telescopes became a reality and covers many of the exciting discoveries made at La Silla and Paranal BBC Sky at Night 1 February 2013 Leave the book on your coffee table certainly but read it first and come back to it regularly It s an intelligent inspiring celebration of a great European scientific adventure Astronomy Now 1 March 2013 **Encyclopedia of Science and Technology Communication** Susanna Hornig Priest,2010-07-14 In the academic world the term science communication refers both to a set of professions such as science journalism and public information work and to an interdisciplinary scholarly research specialization Much of this research is aimed at improving our understanding of the best ways to communicate complex information especially to people who are not scientists Science communication specialists are

concerned with giving people useful information about health environment and technology as well as science itself In order to do this we also need to improve our understanding of how people think form opinions and process information Additionally professional practitioners in science communication are engaged in strategic and ethical decisions every day such as How should reporters cover the issue of climate change Should the views of scientists who do not believe that climate change has been caused by human activity be included alongside the views of those who do in order to give a balanced story or does this mislead the public into thinking that both of these positions are equally accepted within the scientific community The Encyclopedia of Science and Technology Communication provides information on the entire range of interrelated issues in this interdisciplinary field in one place along with clear suggestions on where to begin the search for more Geared towards undergraduate and graduate students in journalism communication mass communication and media studies as well as towards working journalists public information officers and public relations specialists this encyclopedia introduces this vast fascinating field while challenging the reader to question assumptions inherent in communication across disciplinary boundaries Key Themes Associations and Organizations Audiences Opinions and Effects Challenges Issues and Controversies Changing Awareness Opinion And Behavior Critical Influences and Events Global and International Aspects Government Agencies US History Philosophy and Sociology of Science Important Figures Journal Publications Key Cases and Current Trends Law Policy Ethics and Beliefs Major Infrastructural Initiatives Practices Strategies and Tools Professional Roles and Careers Public Engagement Approaches Theory and Research Venues and Channels

The Routledge Companion to Religion and Science James W. Haag, Gregory R. Peterson, Michael L. Spezio, 2012-03-12 The field of religion and science is one of the most exciting and dynamic areas of research today This Companion brings together an outstanding team of scholars to explore the ways in which science intersects with the major religions of the world and religious naturalism The collection provides an overview of the field and also indicates ways in which it is developing Its multicultural breadth and scientific rigor on topics that are and will be compelling issues in the first part of the twenty first century and beyond will be welcomed by students and scholars alike

European Yearbook / Annuaire Européen, Volume 58 (2010) Council of Europe, 2011-11-25 The European Yearbook promotes the scientific study of nineteen European supranational organisations and the OECD Each volume contains a detailed survey of the history structure and yearly activities of each organisation and an up to date chart providing a clear overview of the member states of each organisation

Coloring the Universe Travis Rector, Kimberly Arcand, Megan Watzke, 2015-11-15 With a fleet of telescopes in space and giant observatories on the ground professional astronomers produce hundreds of spectacular images of space every year These colorful pictures have become infused into popular culture and can found everywhere from advertising to television shows to memes But they also invite questions Is this what outer space really looks like Are the colors real And how do these images get from the stars to our screens Coloring the Universe uses accessible language to describe how these giant telescopes work what scientists learn

with them and how they are used to make color images It talks about how otherwise unseeable rays such as radio waves infrared light X rays and gamma rays are turned into recognizable colors And it is filled with fantastic images taken in far away pockets of the universe Informative and beautiful Coloring the Universe will give space fans of all levels an insider's look at how scientists bring deep space into brilliant focus Galileo and 400 Years of Telescopic Astronomy Peter Grego, David Mannion, 2010-09-09 In 1609 Galileo first used his telescope to kick start the science of observational astronomy an event that proved to be of enormous historic scientific and cultural importance Galileo and 400 Years of Telescopic Astronomy will feature the life and achievements of Galileo around which has pivoted the story of four centuries of telescopic astronomy The book will detail how astronomy has progressed through four centuries and contain glimpses of future space research and astronomy goals Uniquely interwoven with the text will be a range of practical projects for backyard astronomers in which to participate projects that serve to illustrate many of Galileo's scientific discoveries **Cosmic Collisions** Lars Lindberg Christensen, Davide de Martin, Raquel Yumi Shida, 2010-04-07 Like no other telescope ever invented the NASA ESA Hubble Space Telescope has given us magnificent high resolution views of the gigantic cosmic collisions between galaxies Hubble's images are snapshots in time and catch the colliding galaxies in different stages of collision Thanks to a new and amazing set of 60 Hubble images for the first time these different stages can be put together to form a still frame movielike montage showing the incredible processes taking place as galaxies collide and merge The significance of these cosmic encounters reaches far beyond aesthetics Galaxy mergers may in fact be some of the most important processes that shape our universe Colliding galaxies very likely hold some of the most important clues to our cosmic past and to our destiny It now seems clear that the Milky Way is continuously undergoing merging events some small scale others on a gigantic scale And the importance of this process in the lives of galaxies is much greater than what was previously thought
