Clark, 1993 Without words children can't talk about people places things actions relations or states and they have no grammatical rules Without words there would be no sound structure no word structure and no syntax The lexicon is central in language and in language acquisition Eve Clark argues for this centrality and for the general principles of conventionality and contrast at the core of language acquisition She looks at the hypotheses children draw on about

possible word meanings and how they map their meanings on to forms The book is unusual in dealing with data from a wide variety of languages in its emphasis on the general principles children rely on as they analyse complex word forms and in the broad perspective it takes on lexical acquisition Word-Formation Peter O. Phonology and Morphology of the Germanic Languages Wolfgang Kehrein, Richard Wiese, 2014-02-21 The papers collected in this volume apply principles of phonology and morphology to the Germanic languages Phonological phenomena range from subsegmental over phonemic to prosodic units as syllables pitch accent stress Morphology includes properties of roots derivation inflection and words The analyses deal with language internal and comparative aspects covering the whole European range of Germanic languages From a theoretical perspective most papers concentrate on constraint based approaches Crucial to those theories are principles of the phonology morphology interaction both within and between languages The well documented Germanic languages provide an excellent field for research and almost all papers deal with aspects of the interface *Bibliography of Morphology, 1960-1985* Robert Beard, Bogdan Szymanek, 1988-01-01 Rather than an attempt at an exhaustive bibliography of morphology this is a collection of major and selected minor works of theoretical interest in the broadest sense The area of morphology represented here exhaustively is contemporary generative theoretical morphology interpreted broadly enough to include theoretically interesting structuralist works works aimed at explaining deep motivations of morphology or pertinent to contemporary theoretical morphology Selected descriptive works have been included as well it is not at all simple to draw a line between descriptive works of theoretical interest and fundamentally theoretical works and in addition we hope to provide entry points into a variety languages for morphologists seeking language specific evidence for general hypotheses Productivity in Argument Selection Amir Zeldes, 2012-12-06 This book centers on the idea that some verbs and other argument structure constructions have an inherently different propensity to realize lexically unfamiliar arguments independently of lexical semantic meaning This notion is explored both qualitatively using selected examples and quantitatively using large amounts of corpus data in both cases primarily from English and German
