

### Question 1 (1 point)

Which of the following is NOT a characteristic of a good research question?

- ☐ It is clear and specific.
- ☐ It is broad and general.
- ☐ It is measurable and testable.
- ☐ It is interesting.

Correct Answer: B (broad and general)

A good research question should be clear, specific, measurable, and testable. It should also be interesting and relevant to the field of study. A broad and general question is not a good research question because it is too vague and cannot be tested or measured.

### Question 2 (1 point)

- ☐ A (r = 0.8)
- ☐ B (r = -0.6)
- ☐ C (r = 0.1)
- ☐ D (r = 0.5)

Correct Answer: B (r = -0.6)

Correlation coefficient (r) is a measure of the strength and direction of the linear relationship between two variables. A positive correlation indicates that as one variable increases, the other variable also tends to increase. A negative correlation indicates that as one variable increases, the other variable tends to decrease. The closer the correlation coefficient is to 1 or -1, the stronger the linear relationship.

**Insights from Research in Science Teaching and Learning** Nicos Papadouris,Angela Hadjigeorgiou,Constantinos P. Constantinou,2015-11-02 This book includes studies that represent the

state of the art in science education research and convey a sense of the variation in educational traditions around the world. The papers are organized into six main sections: science teaching processes, conceptual understanding, reasoning strategies, early years science education, and affective and social aspects of science teaching and learning. The volume features 18 papers selected from the most outstanding papers presented during the 10th European Science Education Research Association (ESERA) Conference held in Nicosia, Cyprus, in September 2013. The theme of the conference was Science Education Research for Evidence based Teaching and Coherence in Learning. The studies presented underline aspects of great relevance in contemporary science education: the need to reflect on different approaches to enhance our knowledge of learning processes and the role of context, designed or circumstantial, formal or non formal in learning and instruction. These studies are innovative in the issues they explore, the methods they use, or the ways in which emergent knowledge in the field is represented. The book is of interest to science educators and science education researchers with a commitment to evidence informed teaching and learning.

**Investigative Science Learning Environment** Eugenia Etkina, David T Brookes, Gorazd Planinsic, 2019-11-15. The goal of this book is to introduce a reader to a new philosophy of teaching and learning physics. Investigative Science Learning Environment or ISLE pronounced as a small island. ISLE is an example of an intentional approach to curriculum design and learning activities. MacMillan and Garrison 1988. A Logical Theory of Teaching: Erotetics and Intentionality. Intentionality means that the process through which the learning occurs is as crucial for learning as the final outcome or learned content. In ISLE the process through which students learn mirrors the practice of physics.

***Teaching-Learning Contemporary Physics*** Beata Jarosievitz, Csaba Sükösd, 2021-09-15. This book presents research contributions focussing on the introduction of contemporary physics topics, mainly but not exclusively quantum physics, into high school curricula. Despite the important advances and discoveries in quantum physics and relativity which have revolutionized our views of nature and our everyday lives, the presence of these topics in high school physics education is still lacking. In this book, physics education researchers report on the teaching and learning of quantum physics from different perspectives and discuss the design and use of different pedagogical approaches and educational pathways. There is still much debate as to what content is appropriate at high school level, as well as what pedagogical approaches and strategies should be adopted to support student learning. Currently, there is a greater focus on how to teach modern physics at the high school level rather than classical physics. However, teachers still lack experience and availability of appropriate teaching and learning materials to support the coherent integration of Quantum Physics in high school curricula. All of the 19 papers presented in this book discuss innovative approaches for enhancing physics education in schools.
