## **Extinction Bad Genes Or Bad Luck:**

Extinction David M. Raup, 1991 Discusses the causes and mechanisms of extinction drawing on the fields of paleontology and statistics to chronicle the histories of extinct species      **Extinction Bad Genes Or Bad Luck** David Raup, 1992-11-03 The science of extinction is a lively and moveable feast of scientific speculation and research Scientist author David Raup takes the subject of nature s disappearing act to task covering everything from the Ice Age Blitzkreig to the fate of the marshes on Martha s Vineyard the extinction of flying reptiles to mankind s impact on tropical reefs Graphs      Wonders Of Science, The: A User Friendly Guide Nathan Aviezer, 2024-07-16 The Wonders of Science reveals that the physical world is a far more complex and amazing world than it appears to be so wondrous that it almost defies comprehension Brilliant scientists have devoted their lives to uncovering these secrets However everyone should be able to share the joy of learning about these wonders No detailed knowledge of science is required to understand these new discoveries which include quantum theory relativity theory string theory chaos theory black holes dark matter dark energy the multidimensional universe quarks and much more These many topics are here described in a clear and accessible presentation that can be enjoyed by everyone Even the greatest scientists sometimes make mistakes Included in the book are some of the blunders made by leading scientists including Nobel Prize winners      *The Sixth Extinction* Richard E. Leakey, 1996-10-01 Richard Leakey One Of The World s Foremost Experts On Man s Evolutionary Past Now Turns His Eye To The Future And Doesn t Like What He Sees To the philosophical the earth is eternal while the human race presumptive keeper of the world s history is a mere speck in the rich stream of life It is known that nothing upon Earth is forever geography climate and plant and animal life are all subject to radical change On five occasions in the past catastrophic natural events have caused mass extinctions on Earth But today humans stand alone in dubious distinction among Earth s species Homo Sapiens possesses the ability to destroy entire species at will to trigger the sixth extinction in the history of life In *The Sixth Extinction* Richard Leakey and Roger Lewin consider how the grand sprawl of human life is inexorably wreaking havoc around the world The authors of *Origins* and *Origins Reconsidered* unimpeachable authorities on the human fossil record turn their attention to the most uncharted anthropological territory of all the future and man s role in defining it According to Leakey and Lewin man and his surrounding species are end products of history and chance Now however humans have the unique opportunity to recognize their influence on the global ecosystem and consciously steer the outcome in order to avoid triggering an unimaginable upheaval      **Perilous Planet Earth** Trevor Palmer, 2003-06-12 A readable account of the history of natural disasters throughout history      **Controversy Catastrophism and Evolution** Trevor Palmer, 2012-12-06 In *Controversy* Trevor Palmer fully documents how traditional gradualistic views of biological and geographic evolution are giving way to a catastrophism that credits cataclysmic events such as meteorite impacts for the rapid bursts and abrupt transitions observed in the fossil record According to the catastrophists new species do not evolve gradually they proliferate following sudden

mass extinctions Placing this major change of perspective within the context of a range of ancient debates Palmer discusses such topics as the history of the solar system present day extraterrestrial threats to earth hominid evolution and the fossil record

**X-Risk** Thomas Moynihan,2020-11-03 How humanity came to contemplate its possible extinction From forecasts of disastrous climate change to prophecies of evil AI superintelligences and the impending perils of genome editing our species is increasingly concerned with the prospects of its own extinction With humanity's future on this planet seeming more insecure by the day in the twenty first century existential risk has become the object of a growing field of serious scientific inquiry But as Thomas Moynihan shows in X Risk this preoccupation is not exclusive to the post atomic age of global warming and synthetic biology Our growing concern with human extinction itself has a history Tracing this untold story Moynihan revisits the pioneers who first contemplated the possibility of human extinction and stages the historical drama of this momentous discovery He shows how far from being a secular reprise of religious prophecies of apocalypse existential risk is a thoroughly modern idea made possible by the burgeoning sciences and philosophical tumult of the Enlightenment era In recollecting how we first came to care for our extinction Moynihan reveals how today's attempts to measure and mitigate existential threats are the continuation of a project initiated over two centuries ago which concerns the very vocation of the human as a rational responsible and future oriented being

Mass Extinction Tricia Andryszewski,2007-12-15 Examines the mass extinction of species in the past and discusses such man made issues as global warming overfishing the introduction of alien species and the use of pesticides which threaten today's species

Extinction in Our Times James P. Collins,Martha L. Crump,2009-07-07 For over 350 million years thousands of species of amphibians have lived on earth but since the 1990s they have been disappearing at an alarming rate in many cases quite suddenly and mysteriously What is causing these extinctions What role do human actions play in them What do they tell us about the overall state of biodiversity on the planet In Extinction in Our Times James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa Joining scientific rigor and vivid storytelling this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change conservation of biodiversity and a host of profoundly important ecological evolutionary ethical philosophical and sociological issues

**The Ten Facts of Evolution** Phillip Engle,2007-12 A book that resolves the conflict between Darwinism and intelligent design between science and teleology by means of Robert F DeHaan's theory of evolution called macrodevelopment

**Extinction** Paul B. Wignall,2019-06-27 Most people are familiar with the dodo and the dinosaur but extinction has occurred throughout the history of life with the result that nearly all the species that have ever existed are now extinct Today species are disappearing at an ever increasing rate whilst past losses have occurred during several great crises Issues such as habitat destruction conservation climate change and during

major crises volcanism and meteorite impact can all contribute towards the demise of a group In this Very Short Introduction Paul B Wignall looks at the causes and nature of extinctions past and present and the factors that can make a species vulnerable Summarising what we know about all of the major and minor extinction events he examines some of the greatest debates in modern science such as the relative role of climate and humans in the death of the Pleistocene megafauna including mammoths and giant ground sloths and the roles that global warming ocean acidification and deforestation are playing in present day extinctions ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

**Introduction to Conservation Genetics** Richard Frankham, David A. Briscoe, Jonathan D. Ballou, 2002-03-14 Genetic diversity biodiversity population management

**Modeling Extinction** Mark E. J. Newman, Richard G. Palmer, 2003 In the last decade or so scientists have started to examine a new approach to the patterns of evolution and extinction in the fossil record This approach may be called statistical paleontology since it looks at large scale patterns in the record and attempts to understand and model their average statistical features rather than their detailed structure This book developed after a meeting at the Santa Fe Institute on extinction modeling comments critically on the various modeling approaches

*Encyclopedia of Biodiversity*, 2013-02-05 The 7 volume Encyclopedia of Biodiversity Second Edition maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms

*Genetics, Paleontology, and Macroevolution* Jeffrey S. Levinton, 2001-08-06 An expanded and updated second edition comprehensively looks at macroevolution integrating evolutionary processes at all levels to explain animal diversity

*The Sixth Extinction* Elizabeth Kolbert, 2014-01-01 Over the last half billion years there have been five major mass extinctions when the diversity of life on Earth suddenly and dramatically contracted Scientists are

currently monitoring the sixth extinction predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs This time around the cataclysm is us In this book the author tells us why and how human beings have altered life on the planet in a way no species has before She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin and through the present day The sixth extinction is likely to be mankind s most lasting legacy compelling us to rethink the fundamental question of what it means to be human Back cover *The Last Extinction* Les Kaufman, Kenneth Mallory, 1993 An expanded updated edition of this classic study on biodiversity and species loss **Out Of Control** Kevin Kelly, 2009-04-30 Out of Control chronicles the dawn of a new era in which the machines and systems that drive our economy are so complex and autonomous as to be indistinguishable from living things

**Extinctions in the History of Life** Paul D. Taylor, 2004-11-11 Extinction is the ultimate fate of all biological species over 99 percent of the species that have ever inhabited the Earth are now extinct The long fossil record of life provides scientists with crucial information about when species became extinct which species were most vulnerable to extinction and what processes may have brought about extinctions in the geological past Key aspects of extinctions in the history of life are here reviewed by six leading palaeontologists providing a source text for geology and biology undergraduates as well as more advanced scholars Topical issues such as the causes of mass extinctions and how animal and plant life has recovered from these cataclysmic events that have shaped biological evolution are dealt with This helps us to view the biodiversity crisis in a broader context and shows how large scale extinctions have had profound and long lasting effects on the Earth s biosphere

**The Late Devonian Mass Extinction** George R. McGhee, 1996 Based on two decades of research The Late Devonian Mass Extinction reviews the many theories that have been presented to explain the global mass extinction that struck the earth over 367 million years ago considering in particular the possibility that the extinction was triggered by multiple impacts of extraterrestrial objects
