Eye Tracking Methodology Andrew Duchowski, 2007-07-31 Despite the availability of cheap fast accurate and usable eye trackers there is little information available on these systems This second edition of Andrew Duchowski s brilliant work contains additional material and fills this gap in the market with an accessible and comprehensive introduction

Eye Tracking Methodology: Theory and Practice Andrew Duchowski, 2013-03-14 The scope of the book falls within a fairly narrow Human Computer Interaction domain i e describing a particular input modality however it spans a broad range of inter disciplinary research and application topics There are at least three domains that stand to benefit from eye tracking research visual perception human computer interaction and computer graphics The amalgamation of these topics forms a symbiotic relationship Graphical techniques provide a means of generating rich sets of visual stimuli ranging from 2D imagery to 3D immersive virtual worlds while research exploring visual attention and perception in turn influences the generation of artificial scenes and worlds Applications derived from these disciplines create a powerful Human Computer Interaction modality namely interaction based on knowledge of the user s gaze Recent advancements in eye tracking technology specifically the availability of cheaper faster more accurate and easier to use trackers have inspired increased eye movement and eye tracking research efforts However although eye trackers offer a uniquely objective view of overt human visual and attentional processes eye trackers have not yet gained widespread use beyond work conducted at various research laboratories This lack of acceptance is due in part to two reasons first the use of an eye tracker in an applied experimental setting is not a widely taught subject Hence there is a need for a

book that may help in providing training

Eye Tracking Methodology: Theory and Practice Andrew

Duchowski, 2012-12-22 The first book to provide an in depth introduction to this topic and to offer instruction on how to set up and operate a system of this type This book is divided in 3 parts the first of which covers the relevant background information including an introduction to the human visual system and key issues in visual perception and eye movement The second part surveys eye tracking devices and gives a detailed introduction to the technical requirements for installing a system and developing an application program The final part looks at potential application in areas such as human factors collaborative systems virtual reality and marketing advertising
